PUBLICATION AND MICROFILM COPYING RESTRICTIONS

Reel duplication of the whole or of any part of this film is prohibited. In lieu of transcripts, however, enlarged photocopies of selected items contained on these reels may be made in order to facilitate research.

A NOTE ON THE SOURCES

The pages which were microfilmed for this collection are in generally good condition in the original. There are some pages, however, which due to age do not reproduce satisfactorily. We have made every technical effort to ensure complete legibility of each and every page.

DOCUMENT FILE, 1850-1878

The Document File is primarily, but not exclusively, a collection of incoming correspondence. The correspondence frequently contains marginal notes by Edison or one of his secretaries, indicating the nature of the reply. The folders comprising this series also contain drafts and final copies of outgoing correspondence, as well as legal, financial, and patent documents. Legal material in the Document File includes agreements, incorporation papers, powers of attorney, mortgages, deeds, and court records such as bills of complaint and answers. Financial material includes unbound accounts, bills, receipts, promissory notes, stocks, bonds, payrolls, and orders. Patent material includes issued patents, patent applications, caveats, and patent assignments. The Document File also contains a variety of other documents, such as memoranda, essays, reports, circulars, insurance policies, inventories and other lists, and, occasionally, a laboratory sketch drawn on the back of another document. Dockets by Edison and his secretaries indicating the date, author, or subject appear on the back of many of the documents. Dockets have been filmed only when they contain significant information not appearing on the document itself.

The materials in the Document File relate primarily to Edison's technical and business activities. The documents are organized by year. Within each year they are divided into broad subject categories such as telegraph, telephone, phonograph, electric pen, and electric light. These subject categories are frequently subdivided into individual companies, such as "Telegraph - Edison & Unger" and "Electric Light - Edison Electric Light Company." Materials relating to the promotion of Edison's inventions in foreign countries will be found in folders such as "Electric Light - Foreign" and "Electric Pen - Great Britain."

Some technical material can also be found in the "Patents" folders, which contain a wide variety of documents relating to Edison's patents. These include issued patents, patent applications, and caveats; correspondence, bills, and receipts from Edison's patent attorneys; patent-related correspondence from the U.S. Patent Office and from Edison's business associates; preliminary statements, correspondence, and memoranda regarding patent interference cases; and patent assignments and agreements.

Documents relating to more than one subject are filed in "Edison, T.A. - General." Particularly after 1876, information about a technology can usually be found in "Edison, T.A. - General," as well as in folders directly related to that technology. The "Edison, T.A. - General" folder for each year also contains documents relating to personal matters and to subjects which do not fall under the main subject categories. Family-related correspondence is usually filed in "Edison, T.A. - Family," although some family correspondence can also be found in the "Railroad" folders, which concern investments by Edison and his brother, William Pitt Edison, in street railways in the vicinity of Port Huron, Michigan.

Drafts of articles by Edison and related correspondence, requests for Edison to write articles, correspondence relating to articles about Edison, and letters from journalists seeking to write about Edison and his inventions are filed in "Edison, T.A. - Articles." Correspondence and other documents relating to book and journal orders, club and society memberships, and honors and awards are filed in folders such as "Edison, T.A. - Book and Journal Orders," "Edison, T.A. - Clubs and Societies," and "Edison, T.A. - Honors and Awards."

After 1877, unsolicited suggestions and requests for advice about technical matters are filed in "Edison, T.A. - Advice." Unsolicited letters requesting agencies for Edison's inventions, inquiring about the purchase or cost of his inventions, or asking for information about his inventions are filed in "Edison, T.A. - Unsolicited Inquiries." In 1878 Edison turned briefly to the invention of a hearing aid and the large number of inquiries about this invention are filed in "Deafness." The "Deafness" folder also contains correspondence about Edison's own deafness.

For each year of the Document File a list of folder titles and identification numbers precedes the filmed documents. Within each folder, the documents are preceded by a descriptive note listing the types of documents contained in that folder, any variations from chronological order, and, wherever appropriate, cross references. The note also provides a description of any material not selected for filming.

Correspondence, agreements, and other material similar to that in the Document File can also be found in the Harry F. Miller File and the R.W. Kellow File, in the Legal Series.

LOCAL INTELLIGENCE.

Presumably we believe that the Grand Trunk Railway give presents, every 5 months to their passengers, who carries last Wood and Oil, some nice and many journey. Now we have rode with Mr. R. L. Hartman, one of their Engineers and we do not believe you could fall in with another Engineer, more careful, or attentive to his duties, being the most steady driver that we have ever rode behind and we consider ourselves some judges, having been Railway riding for over ten years constantly, I always find, and observing, and ever at his post. R. L. Hartman was a great deal does not cut out for the repairs of the other Engineers etc. We would respectfully recommend him to the highest consideration of the U. T. R. Office.

The more to do the more done. We have observed along the line of railway at the different stations where there is only one Porter, such as at Usher, where he is fully engaged, from morning until late at night, that he has everything clean, and in first class order, even the platform the more does not he for a week after it has fallen, but is swept off before it is allowed down, at other stations where there is two Porters things are just a truce.

J. S. P. Hathaway runs a daily Stage from the station, to New Baltimore in connection with all Passenger Trains.

Professor T. A. has returned to Canada after entertaining delighted audiences at New Baltimore for the last two weeks listening to his comical lectures.

Dilettante. A gentleman by the name of Watkins agent for the Egyptian government, recently tried to sell the Grand Trunk Railway company of 500 acres dollars the price of a value he offered to have lost at Paris, and he was well only successful in the undertaking.

But by the inimitable perseverance and energy of Mr. W. Smith, detective of the company. The case we cleared up in a very different style. It seems that the would be gentleman while crossing the river on the ferry back had the check off of his value, and carried the value in his hand, not forgetting to put the check in his pocket, the baggage men seized the baggage after leaving Port Huron, while looking over his book to see if he had any thing with him, but to his great surprise he did not see it, he telegraphed back stating so, but no baggage could be found. It was then given into the hands of Mr. Smith, who after, in the morning Mr. Watkins, shortly after to Mr. Tolman, Agent at Detroit asking to be satisfied for the losses had sustained in consequence, and relieve Mr. Tolman to Mr. W. A. Howard Esq. of Detroit, and the Hon. Mount Brown & Wilson of Toronto, for reference. We hardly know how such men are taken in, without traveling villains, but what is the case, now Mr. Smith, cleared up the whole mystery by finding the lost value in his possession, and the Egyptian Agent offered to pay ten dollars for it, which he had put the company to, and have it rather washed over.

Not so, we feel that the villain should have his name put up in the various T. R. in the

country, and then he will be able to repeat in his true roles.

We have noticed of late, the large quantities of rice, taken by Lieutenant Hennes, 14 regt, over the U. T. R. to their comrades at Vicksburg, and on inquiring find that he has received more than 1000 every other man in the regiment. If his energy and perseverance in this field when he meets the need, is as good as it was in his recruiting on the line of the Grand Trunk R. he will make a unit that the south would soon forget.

Heavy shipments at Baltimore. We were delayed the other day at New Baltimore Station, waiting for a friend, and while waiting, took upon ourselves to have a peep at through country we saw in the freight house of the OTTR 400 bbls of flour and 150 bags, waiting for shipment to Portland.

BIRTH.
At Detroit Junction O. T. R. 10-12-61 Mrs. O. G. J. has, the wife of A. Little of a daughter.

THE WEEKLY Eight Cents Per Month.
LOCAL INTELLIGENCE.

Premiums—We believe, that the Grand Trunk Railway, give premiums, every 6 months to their Engineers, who use the least Wood and Oil, running the usual journey. Now we have rule with Mr. E. L. Northrup, one of their Engineers and we do not believe you could fall in with another Engineer, more careful, or attentive to his Engine, being the most steady driver that we have ever rode behind [and we consider ourselves some judges, having been Railway riding for over two years constantly.] always kind, and obliging, and ever at his post. His Engine we understand does not cost one-fourth for repairs what the other Engines do. We would respectfully recommend him to the kindest consideration of the G. T. R. Office.

The more to do the more done—We have observed along the line of railway at the different stations where there is only one Porter, such as at Utica, where he is fully engaged, from morning until late at night, that he has everything clean, and in first class order, even the platform the snow does not lie for a week after it has fallen, but is swept off before it is almost down, at other stations where there is two Porters things are visa a versa.

J. S. P. Hathaway runs a daily Stage from the station, in New Baltimore in connection with all Passenger Trains.

Professor Power has returned to Canada after entertaining delighted audiences of New Baltimore for the past two weeks listening to his comical lectures etc.

Did not succeed—A gentleman by the name of Watkins agent for the Haytina government, recently tried to swindle the Grand Trunk Railway company out of sixty seven dollars the price of a valise he claimed to have lost at Sarnia, and he was well wick successful in the undertaking.

But by the infatigable perseverance and energy of Mr. W. Smith, detective of the company. The case was cleared up in a very different style. It seems that the would be gentleman while crossing the river on the ferry boat, took the check off of his valise, and carried the valise in his hand, not forgetting to put the check in his pocket, the baggage men missed the baggage after leaving Port Huron, while looking over his book to see if he had every thing with him, but to his great surprise he had lost one piece, he telegraphed back stating so, but no baggage could be found. It was therefore given into the hands of Mr. Smith, to look after, in the meantime Mr. Watkins wrote a letter to Mr. Tolman, Agent at Detroit asking to be satisfied for the loss he had sustained in consequence and referring Mr. Tolman to Mr. W. A. Howard Esq. of Detroit, and the Hon. Messrs. Brown & Wilson of Toronto, for reference. We hardly know how such men are taken in with such traveling villains, but such is the case, meantime Mr. Smith, cleared up the whole mystery by finding the lost valise in his possession, and the Haytina Agent offered to pay ten dollars for the trouble he had put the company to, and have the matter hushed over.

Not so, we feel that the villain should have his name posted up in the various R. R. in the

country, and then he will be able to travel in his true colors.

We have noticed of late, the large quantities of men, taken by Lieutenant Donahue, 14 regt, over the G. T. R. to their rendezvous at Ypsilanti, and on inquiring find that he has recruited more men than any other man in the regiment. If his energy and perseverance in the field when he meets the seceder, is as good as it was in his recruiting on the line of the Grand Trunk R. he will make a mark that the seceder won't soon forget.

Heavy Shipments at Baltimore—We were delayed the other day at New Baltimore Station, waiting for a friend, and while waiting, took upon ourselves to have a peep at things generally we saw in the freight house of the GTR 400 bbls of flour and 150 bags, waiting for shipment to Portland

1868. Edison, T. A. - General (D-68-001). Cat. 29,592

A 5 1/4 x 22 1/2 inch framed sheet containing signatures of individuals, including Edison, who promised to contribute money to "our friend Corey." The introductory remarks are in Edison's hand.

1868. Edison, T. A. - General (D-68-001). Cat. 40

An original specimen of Edison's handwritten telegraph copy made while he was employed as a telegrapher for Western Union Telegraph Company in Boston. It is written in black ink on yellow paper and is mounted in a gold painted frame. The specimen was preserved by Donald McNicol, historian of the Telegraph Pioneers Society, and presented to the Edison Museum (now Edison National Historic Site) by his widow in 1954.

This is the
only original
copy of Mr. Edwards
writing while he
worked as a
Morse Telegrapher,
B-Store, 1868

We have been driven to adopt this course, when it is proved that had we
uniformly received courteous, gentlemanly & humane treatment & been subjected
to no tyrannical rules had the old standard of salaries been carefully
maintained & some system of promotion established so that the for distant
future we might see at least a single ray of hope there would have
been no cause for complaint. They believe that other hands ~~had~~

D-69-002	Edison, T. A. - Bills and Receipts
D-69-003	Patents (not selected)

1869. Edison, T. A. - General (D-69-001)

Correspondence, some by Edison; agreement, advertisement.

All selected.

(Copy) Original sent to Patent Office January 27th 1875
to be recorded.

Boston, April 7th 1879.

In consideration of various sums of money received by me at sundry times since July, 1875, and of forty dollars received this day of E. Baker Welch, of Cambridge, Massachusetts, I, Thomas A. Edison, of Boston, Massachusetts, do hereby sell, assign and transfer to said E. Baker Welch an undivided half interest in a double transmitter which I have invented and am about to put on the lines of the Atlantic & Pacific Telephone Company - and I do hereby agree to apply for a caveat or patent for the same at such time as said Welch shall recommend or request me to do, and to assign to him one half interest in the said patent, or in any rights or privileges accruing under a caveat or patent at any time - I do also hereby agree and bind myself to sell, assign and convey to said Welch, for the consideration before mentioned herein one undivided half interest in any improvements which I may make to the said double transmitter, and one undivided half interest in any other instrument or any other principle, method or system, which

I may invent, or obtain, a caveat or patent
for, to be used, for the transmission of
messages on telegraph lines. both ways
simultaneously.

Signed - Thomas A. Edison.

The words "or patent at" on the first page
third line from the bottom are inter-
lined in Edison's handwriting with
blue ink - the word at which was in
the original being erased also with blue
ink. The figure "7th" in the date also
put in by Edison with blue ink.

Boston, January 27th 1875

Having seen the original of
this paper signed by Thomas A. Edison,
and compared this copy with it, I
certify that this is a true copy.

New York - June 10

Friend Frank -

Please write and let me know how matters stand with you. What about the rent of the shop, did you pay it etc. Have you got any show for building any lines - Has Williams finished all the instruments and how many have you now altogether - What instrument is O'Donnell going to use, do you work by the day for him - do you know what he gets, Did he use the wire (red) is Hanna & Collette bill paid, Did you sell him any insulators, Has Hills given around what did he say. What appears to be the matter with the shop - I have sold six instruments which were to be delivered last Monday and I think I have lost the sale in consequence of the delay. When will they be done in your opinion. Does the antiquated, fossil ^{parental} D.D. Cummings still exist around the sacred precincts of that dilapidated mansion does he still pursue the ignominious of Private Telegraphs, that bright beacon light upon the headlands of ~~the~~ eternally whereon the bright prospects of two sanguine young

men were totally wrecked and obliterated and
their hopes flown to that far off land from
whence no traveller, line repairer of Telegraph
Operator return, alas! that the bright
vision of untold wealth should vanish like
the fabric of a dream, that two ambitious
mortals gifted by the genius of enterprise, and
strength, should drink the bitter dregs of
premature failure in their grand dreams for
the advancement of science, etc — — — Reno

Does Cummings Jr still exercise his matchless
skill, perseverance, and abiquity, which the lamented
Valentine was wont to pride himself upon —
Has no string of the lost one reached his
sorrowing collaborators; or does he still wanders
sad and sorrowful among the busy haunts of
men bent upon the self destruction which inevitably
awaits those who pamper to the last of

"Collateral Broken" —

Such is the Kingdom of heaven!

Please answer the questions ~~of~~ in the
foreground of this salubrious document and
oblige yours Truly —

only one

New York, July 26 1869

Friend Frank

Your letter received, I am sorry that Skillings instruments
act in that manner, Chas Williams is to blame for it, the
last lot were constructed very badly. Redding is
making a Printer and if it works satisfactory it is
my intention to order another one and two
Transmitters and place them on Skillings line
It would appear from what has happened
already that the Grey-eyed specter of
destiny has been our guardian angel, for
no matter what I may do I reap nothing
but trouble and the blues, I had saved
¹⁶⁰~~400~~ dollars and from experimenting for other
parties and with this I came to Boston
and paid my debts which took the entire

amount leaving me without a single penny when I arrived in NYork, It is all I can do to keep the wolf from the door, and supply bedding with money to make the Printer. It is useless for me to lay around or come to Boston, for I cannot make any money there and we should be farther than ever from the solution of this interesting problem. If I stay here I can earn enough money to fix the thing all straight within a reasonable time, I think the whole cause of the frequent disorders of Skillings apparatus is want of battery, I would advise you to suggest to Skillings the purchasing of two or three cups more battery and have them put on the line, If you will read the Contract you will notice

THE GOLD AND STOCK
REPORTING TELEGRAPH.
OFFICE, NO. 18 NEW STREET,
P. O. BOX 6131.

E. S. LANE,

F. L. ROSE,
Manager.

New York,

1886
that it does not mention the purchase of supplies ~~and by some~~ neither was it mentioned at the time, Therefore I do not see how Skillings can expect you to buy the Vitrol, Please do all you can till I get the Printer Ready, and put them on the line, You ought to know me well enough to know that I am neither a dead beat or a selfish person, and that I always do as I agree without some damnable god damnable ill luck prevents it, If I make anything it happens somehow that some dead beat like Adam eats it all up, However I'll never give up for I may have a streak of luck before I die.
Yours Edison

Send you some money if you hold up, will \$10. help all going at -

 T. A. Hanaford Esq

New York, Dec 1 1869

Hanaford

Please Tell Skillings that I am making
 a Printer for him which will be just
 what he needs - If welek wont
 permit you to use the Magnetographs
 until I get the Printer done, please
 have George fix up the Brass Kettles
 so they will last till I get the
 Printers Ready - Also ask Skillings
 to have little patience - the difference
 in cost will be 135 dollars, so
 Skillings will have to pay \$130,

F. A. Hanaford Esq
No 10 Wilson Lane
Room 8
Boston Ma

being the difference in Cash - I will
also give the Continental & Downer
Printers at \$150, and take their
instruments, I am disposed to do
all I can even to the extreme
Length of my pile - ~~the~~
~~for~~ it is not unlikely that the
Printers may prove to be worthy
of introduction upon other Lines
There - please write ~~me~~ ~~to~~ let me
know if it is the Lines that give
trouble or instruments.

I am yours
Edison

Friend Abanford

Did Mr Welch allow you to put
Maggelos upon Skillings Line,
Also what does Skillings say
about Printer, Does he feel
Satisfied that we intend to
fulfill our Contract (Answer) with
particular

Edison

New York Sept 17 1847

Friend Hanaford

I received your Letter, but owing to things
being so mixed by the Consolidation of SS Laws
Gold reporting ~~Telegraph~~ & Callahans Stock
reporting ~~Telegraph~~ & the ^{my} consequently dismissal
has upset all my calculations, The Printers
are being made but were delayed, by the
removal of Phelps Shop, and a rush
of work - I expect to receive pay ^{soon} for
a job I am doing now and I will remit
you sufficient money to purchase
Skillings Balthus although, if you
will read the Contract, you will see
we did not Contract to furnish supplies
, but only to keep the Line in
good working order, If I was you I
should inform Mr Skillings

GENERAL TELEGRAPHIC AGENCY,
OFFICE.

EXCHANGE BUILDINGS,
Nos. 78 and 80 BROADWAY, Room 48.

A necessity has long been felt, by Managers and Proprietors of Telegraph Lines, Inventors of Telegraph Machinery and Appliances, etc., for the establishment of a Bureau of Electrical and Telegraphic Engineering in this city. It is to supply this necessity that we offer facilities to those desiring such information and service.

A LEADING FEATURE

will be the application of Electricity to the Arts and Sciences.

INSTRUMENTS

for Special Telegraphic Service will be designed, and their operation guaranteed.

CAREFUL AND RELIABLE TESTS

of Instruments, Wires, Cables, Batteries, Magnets, etc., will be made, and detailed written reports furnished thereon.

CONTRACTS

for the Construction, Re-construction and Maintenance of entire Private or Commercial Telegraph Lines will be entered into upon just and reasonable terms.

VARIOUS APPLICATIONS OF ELECTRICITY.

Special attention will be paid to the application of Electricity and Magnetics for Fire-Alarms, Thermo-Alarms, Burglar-Alarms, etc., etc.

TELEGRAPHING PATENTS.

We possess unequalled facilities for preparing Claims, Drawings, and specifications for Patents, and for obtaining prompt and favorable consideration of applications for Patents in the United States and Foreign Countries.

EXPERIMENTAL APPARATUS.

Attention will be paid to the construction of Experimental Apparatus, and experiments will be conducted with scientific accuracy. Parties at a distance, desiring Experimental Apparatus constructed, can forward a rough sketch thereof, and the same will be properly worked up.

DRAWINGS, WOOD ENGRAVING, CATALOGUES, Etc., prepared in the best and most artistic manner.

PURCHASING AGENCY.

Telegraph Wire, Cables, Instruments, Insulators, Scientific and Electrical, and Electro-Medical Apparatus, Telegraph Supplies of all descriptions, Telegraphic and Scientific Books, etc., will be purchased for parties favoring us with their orders, and forwarded by the most prompt and economical conveyance, and as cheaply as the same could be purchased by our customers personally. Our facilities for this business are unequalled.

Letters and orders by mail should be addressed to
Box 6010, P. O. NEW YORK.

Mr. Harrington

Dear Sir

We need "leave" papers immediately, as the parties who own it seem to desire it before we put our shafting up, which approaches completion.

Please embody following in lease.

That:

We shall have the right to run nights.

Shall have the right to use the power nights by paying for its cost.

We shall have any amount of power we desire above the four horse power which is included in the rental, by pay one hundred and fifty dollars per horse power per year. The total amount of power shall not exceed 10 horse.

That he will heat the shop by steam

I write instead of coming to see you is that I am working a night gang of men on the perforator which I hope to have done by Tuesday evening or Wednesday 10 o'clock. I cannot have all the keys in but will have as many as possible. I am compelled to stay here and watch men and give instructions. — Mr. Hyde is attending to the belt pulleys; shafts & Carpenter work all right. I may possibly come in to see you tomorrow at 11.30.

Yours Respy
J A Edison

1870. Telegraph - Automatic Telegraph Company (D-70-003)

Correspondence, some by Edison; agreements.

Not selected: duplicate copy of agreement.

Memorandum of an Agreement between
J. A. Edison, of Newark, ~~New~~ Jersey, and
D. H. Craig, ^{Agent,} of Peekskill, New York, entered into
on the 3^d of August, 1870.

Whereas Mr. Edison has invented
or is about to invent and construct a
Machine for the purpose of Perforating
Paper, in connection with Automatic
or "Fast" Telegraphy;

And whereas Mr. Craig, for him-
self and as agent for other parties, is de-
sirous of purchasing the control of
and an interest in said Perforating
machinery, and in the Patent or Patents
which may be obtained for the same,
together with all improvements upon
said machinery;—

Now, therefore, in consideration
of the sum of one dollar, the receipt
of which the said J. A. Edison hereby
acknowledges, and other considera-
tions to be named, he agrees to and
with the said D. H. Craig, Agent, as follows,
to wit:—

To devise and perfect a Perforating
Apparatus, to be constructed of Steel and
Iron, not to occupy a space exceeding
twelve inches square, to have an extreme-
ly small number of pieces, to bring to
reliability to the highest point possible
with mechanism, to be capable of a
speed of twenty-five words or more,
per minute, according to the expertness
of the writer, to space, write & punch

mathematically accurate, to weigh not more than twenty pounds, to require no extraneous power, motor or force, but to work by the mere act of working. The cost, when manufactured in numbers, not to exceed fifty dollars. The machine to be perfectly adapted for the work to be performed, and to have nothing further to be desired in the ~~the~~ directions.

He, Edison also agrees to procure a good substantial United States Patent, to cover every patentable feature of the said machine or invention, and will assign the same to the said D. H. Craig, ^{agent} together with all improvements which the said Edison may make in machinery for Perforating paper for Automatic or Fast Telegraphy, upon the following terms and conditions, to wit:

The said Craig to pay to said Edison within thirty days after the completion of a perfect machine, as above, and applications for a Patent for the same, the sum of thirteen hundred dollars in cash, and thirty seven hundred dollars of the paid-up, or non-assessable stock of the National Telegraph Company, together with one-half of whatever sum or advantage which said Craig may receive from the National Telegraph Co. or from any other party or parties, over and above the sums above named - the said Craig hereby promising and agreeing to make the

most advantageous arrangement possible for the sale of the invention and patents, free of all charges for commissions or services - and hereby promises & agrees to pay over to said Edison, forthwith, one half of whatever sum or sums may be received over and above the sums herein ^{before} provided to be paid to Mr. Edison - and said Craig also promises and agrees to make no sale or bargain for sale, of the said machine or patents without the full knowledge of said Edison - and said Craig also agrees that he will not make any sale of the machine or patents to any party without the consent of said Edison, except upon the distinct agreement or understanding that said Edison is in all cases to have the preference in all contracts or agreements for the manufacture of the said machines.

It is mutually understood and agreed between the said Edison and the said Craig that for all acceptable improvements which the said Edison may devise for facilitating the Perforating of Paper, upon the completion of the before mentioned machine, he is to be paid by said Craig a fair and reasonable sum for all the time, labor or expense which said Edison may expend in perfecting and improvements. Provided

however, that in fixing the measure of such payments by said Craig, due regard is to be had to the fact that said Edison is to participate in the advantages of the improvements to the same extent as said Craig.

It is also mutually agreed between said Edison and said Craig, that in the event of any differences in construing their obligations to each other under this agreement, the matter or matters in dispute shall be referred to the President

of New York City
be conclusive
in the said Edison

however, that in paying the measure of such payments by said Craig, due regard is to be had to the fact that said Edison is to participate in the advantages of the improvements to the same extent as said Craig.

It is also mutually agreed between said Edison and said Craig, that in the event of any differences in construing their obligations to each other under this agreement, the matter or matters in dispute shall be referred to the President of the Board of Trade of New York City and his decision shall be conclusive and be binding upon the said Edison and the said Craig.

15 H Agreement

J. A. Edison

W. Craig, Agent

Aug-2-1870

15 Railroad Avenue
New York

P.O. Box, 3237
New York, Aug. 12/70

Confidential.

Dear Mr. Edison:

As I have not heard to the contrary, I suppose your financial wants have been met. At the end of a few days I hope to be in funds beyond my immediate necessities, & if you should then be in want, I will most cheerfully aid you. It evinces a mean disposition and great want of common sense, for any one who has control of your very superior talents, to keep you in trouble about a few paltry dollars. When you & I get into close business relations I will assure you of better treatment.

In all of my calculations & estimates, I have assumed that one must employ a copyist to write out our messages, at the rate of one copyist to every 500 words per hour. In talking upon this subject with Prof. Larmer, yesterday, he told me it was perfectly practicable to have a little writing (or printing) man.

By the note to Larmer is another factory, say 20 at the
Larmer is another factory, say 20 at the

chine by which at least 3500 words
per hour could be written in plain
Roman characters—that he had worked
the thing out years ago, but had never
had time to finish the machine, and
had no time now, but would give
me all his ideas & help any competent
machinist to perfect the thing, and then
I could give him one of the machines
for his own use, and any thing
more that I could afford.

Now, you can see that such a machine
could be made of great value to any
company or any person, having
much copying to do, and I am sure
I could find a market for 10.000 of
them in a very short time.

Can I not present upon you to
take hold of this idea of Farmer's &
work it up into a practical machine—
you to have the exclusive manufacture
of the machines and you Farmer &
myself sharing equally in all expenses
& all profits. I greatly wish I
could ablige you in this matter.
I have been a sufferer in this direction
already, to the extent of some \$5000 six
years ago—but any inventor was not

blessed with Farmer's or your head.
You can work it out, I am sure.

Farmer is here to test our line, and
I suppose he will stay till Saturday. I wish
you could come in early Saturday morning
and meet Farmer—say at 8 a.m. at the
Aston House, and have an hour's talk with
him, and then see me before you go
home. If you cannot come so early,
as 8 or 9, then fix the hour at 1 o'clock at
66 Broadway.

Yours faithfully,
D. H. Crois

[ENCLOSURE]

New York Aug. 12/70

Prof. Farmer

My dear Sir:

I have arranged with the bearer, my friend, J. A. Edison, a genius only second to yourself, who will give us the benefit of his brains and machine shop, to work up your ideas for the writing machine, as you have proposed to me. I propose to pay all necessary expenses in the development of the idea - to debit the invention accordingly, and when the necessary advances shall have been reimbursed, then the profits to be divided equally between you, Mr. Edison and myself. I to manage the whole business to the best of my ability without any charge whatever for commissions.

Mr. Edison assents to this programme, & will unite with us in the ~~execution~~ ^{preparation} of a suitable memorandum covering these points.

Yours truly D. H. Brown

[ENCLOSURE]

Prof. M. G. Farmer
Astor House
New York

P.O. Box 3237

New York, Aug. 19/70

Dear Mr. Edison:

Inclosed, please find the balance due to you on the model Relay - &c.

Mr. Little says he does not want half the evident speed of your Relay, and hopes you will give all possible care to make the works substantial, & so that the machine can be relied upon in Repeating offices. He takes to it kindly and decidedly, and I can rely upon him for the strongest testimonials, if needed.

If the inclosed memoran-

deed is satisfactory, please
sign & return one to me, through
the P.O. If not satisfactory, change it
to suit yourself.

I keep all my arrangements
with you private strictly so - &
yet, I suppose it will be impos-
sible to prevent a few people
around us from suspecting that
we are putting our heads together.

I have not been able to get off
to Washington yet, but hope to do
so today, and on Monday, if you
will come in, I think, you will see
400 words per minute from Wash'g.

Yours faithfully D.H. Davis

Memorandum of an agreement between
J. A. Edison, of Newark, N. J. and D. H. Gray, of
Pekskill, N. Y., entered into at the City of New
York, August 17, 1870.

Whereas Mr. Edison has invented a new
and valuable Repeater, for Automatic or Fast
Telegraphy—

And whereas Mr. Gray desires to become
interested in the ownership of said invention
and in any patent or patents which may be
granted to said Edison in connection with
the same, or any improvements upon the same,—

Now, therefore, in consideration of one dol.
lar paid to said Edison by said Gray, the receipt
of which is hereby acknowledged, the said Edi-
son and the said Gray, promise and agree as
follows, to wit:

Mr. Edison will, if possible, improve the said
Repeater and will endeavor to secure all the
valuable points of the same by Letters Patent
from the United States Government.

Mr. Edison will recognize Mr. Gray's inter-
est in the invention and in any patent
which may be received for the same, to the
extent of one-half of the whole, and will, if
desired by said Gray, execute all necessary
or proper papers connected with the title
or ownership.

Mr. Gray will furnish to Mr. Edison all
necessary money to pay the expense of
a working model of said Repeater
and also all patent fees and expenses.

Mr. Gray is to have the management
of all business connected with the

sale and use of said Repeater and Patents, but is in no event to make a sale of the same without the full knowledge of Mr. Edison, and is in no event to sell the invention except with a proviso that Mr. Edison is to have the exclusive manufacture of the machines, provided he so desires, and also provided he will make them over and as cheap as they can be made by other first class machinists.

Mr. Craig is to charge no commissions for his services as manager of the said business, & hereby promises and agrees to hand over to said Edison one-half of whatever sum or sums he may receive for the said invention or patents less only actual and necessary disbursements connected with the Patents or business.

Continued with Craig, Jr.
in Enclosure

NEWARK Dec. 7. 1890

Friend Craig

Yours just received - It appears that Mr Harrington came over here and engaged in conversation with Mr Hyde ^{and} the draughtsman regarding the Perforator and by his fiddling manner got them so excited that they didn't know which end they stood on, as neither one of them ever saw the perforator until the day you was here, when it was brought from the other shop, and neither of them have worked or attempted to work it or even understand it = I had taken one of the parts out when experimenting with it & did not replace it and when Mr Harrington came over the draughtsman attempted to work it ^{and} couldn't, and from this Mr Harrington conceived that it was a failure = It was nothing but an experiment to determine if the principle and details were correct. They are correct and you will have your perforator in good time and beyond your ^{most} sanguine expectations. I have eight men working on a pair night ^{an} day and it is utter impossibility to hurry it more than 3 am, I and the draughtsman and men were up nearly all last night = Galileo discovered the principle of accurate Holography in the swinging Lamp of Pisa - It wouldn't be a very sage remark to say - why damn it that lamp ain't a clock = You must remember that I am making your

Copying printer which will be very rapid also your
Transmitting & receiving motions, which includes nearly
all your machinery for the present you must know that it
takes considerable thinking and brains to carry on all these
machines at once = Besides a thousand small details
in the other room in the manufacture of 150 printing
Machines = I have also in process of manufacture
12 Universal Printing Machines, a Regulating Temperature
Machine Two other perforating Machines - a
New screw slotting machine, A wire straightening
Machine = Polishing Machine, and other things which
also takes thinking = Regarding an excess of expenditure
I got his permission Every time that I made an
overpurchase and gave satisfactory reasons 'at the time =
I cannot take Ten thousand dollar contracts
on three thousand or four thousand worth of
Machinery - The manufacture of mechanism is a
slow operation being legitimate, and all legitimate
Businesses they are slow but sure, and the slower
the more sure, If Mr. H. feels dissatisfied, with the
expenditures (every cent which is represented in good sound
solid and accurate machinery) I will sell some of my
stock coming to me from the American Printing Co and
pay him for what he has spent or the excess over

what he expected to pay = Mr H. says that some of our
experiments were useless = But after he has had more
experience in this business, he will find that No experiments
are useless, I had thought of coming over to see you
today but cannot find time -

Of course I expect you (having had experience)
understand this, My men here say that Mr
H understood them the exact opposite of what they
mean =

Yours Truly

Edison

OFFICE OF THE
AMERICAN TELEGRAPH WORKS
No. 103 NEW JERSEY RAILROAD AVE.
NEWARK, N. J.

Newark, N. J., Dec 187

Mr. Harrington

Mr. Gould would like some
Cash on account - I think \$200. would satisfy
him, I shall be ready by Saturday I think
to show you the Copying Printer if everything
goes smoothly with it - I shall also be able
to show you the Transmilling & Receiving Motor
or Apparatus by Next Tuesday I think =
The two Punching Machines will probably be
done inside of two weeks from today =
You quite misunderstood my men here; The
Machine that they attempted to show you
work had been taken apart by me in
Experimenting, and put together again but with
not all the parts in, that is the reason
it did not work - Mr. Craig saw it operate
But it is of no consequence whether it worked
or not it was an experiment as I told you
once before, not made to show but to
satisfy me that I was all right, The Machines
that I am making now will be made well &
Complete, & if they don't perforate more than
80 words a minute then there will be a

funeral over here pretty quick = I shall need
considerable money Saturday to pay hands
off as I am running about 45 hands
day and night Sixteen of them are on
the Perforators =

I insured today for \$10,000 on Machinery
and \$3000 on Stock in N York Cos
at $1\frac{1}{2}$ per cent = Is that right = insurance
commences tomorrow 7 o'clock

You must remember that the money you
are now paying is not for Machinery
But for work on The Automatic System
and on the Gold & Stock Contract
of \$1.500 =

Yours very Respy

J. A. Edison

P.S. I am attending to the shop from
seven in the morning till one & two o'clock
next morning - so you cannot blame me
for losing him

This Memorandum of an Agreement made and entered into this 18th day of April 1870, by and between "The Gold and Stock Telegraph Company of the City of New York", parties hereto of the first part, and Francis S. Pope, James H. Ashley, and Thomas A. Edison, parties hereto of the second part, jointly and severally witnesseth:

That, for and in consideration of the sum of one dollar to them in hand paid by said party of the first part (the receipt whereof is hereby acknowledged) and of the covenants and agreements of the party of the first part hereinafter expressed, the said Francis S. Pope, J. H. Ashley and Thomas A. Edison, parties hereto of the second part, jointly agree and each of them separately for himself agrees, as follows:

- First: to sell, assign, transfer and convey, (and they hereby do sell, assign, transfer and convey) to The Gold and Stock

Telegraph Company of the City
of New York; each, every, and
(except as is hereinafter except-
ed or reserved) with the right
title and interest in to and
under each any and all of
the inventions and improve-
ments by said parties of the
second part, either or any
of them heretofore made, or
hereafter to be made, and
of the patents therefor hereto-
fore issued to and secured
by, or hereafter to be issued or
reissued and secured by said
parties of the second part, either
or any of them, for printing
telegraph instruments, appara-
tus and methods - and
also each, every, and (with
the same exceptions and re-
servations as is above referred
to) with their right title and
interest of each and any of
them, as the assigner or assign-
ees of any patent or license
under any patent, to any -

other person or persons, issued, or to be issued, or reissued, for any printing telegraph instrument, apparatus or method:

Second: To sell, assign, or transfer (and they hereby do sell, assign and transfer) to said party of the first part each, every and all the right title and interest in and to the lines of telegraph with the wires, poles, insulators, instruments, batteries, and fixtures, or every thing to said lines of telegraph pertaining, now in the possession and under the control of said parties of the second part either or any of them, (covenanting hereby that they or either or any of them who may have the same in possession or under control has and have a good and absolute right title to the same and to surrender and turn over (and they hereby do surrender and turn over) the same in working order, and for

and clear of all incumbrances, and liens whatsoever to said party of the first part with all the subscribers to quotations of gold, stocks, and Commercial news by said lines of telegraph, and all subscriptions due and to become due from said subscribers on or after the 15th day of April 1870

Third: To make, execute and deliver to said party of the first part, their successors or or assigns, on demand, any and all proper instruments in writing which may be required to effectuate or express the sales, assignment and transfers, either or any of them hereby made or agreed to be made.

Fourth: That they will, not for a period of ten years from the date of execution of these presents, engage, either directly or indirectly, as individuals, or by association, in any telegraphing which is in effect

in rivalry or opposition to the business of the party of the first part - and that they will not infringe any patent rights of party of the first part, but will by all means in their power, discourage others from such rivalry, opposition and infringement: and will assist the party of the first part in maintaining its rights and business against any and all persons who may attempt such rivalry, opposition or infringement.

Fifth: That said parties of the second part hereby covenant that they, or some or one of them has, or have a good and absolute right and title in and to each and all of the property hereby assigned and transferred to the party of the first part, and further that they (and any particular one or two of them, as the case may be and as may be required) will make and

Complete any and every assign-
ment and transfers hereby agreed
to be hereafter made to the party
of the first part, their suc-
cessors or assigns, free and
clear of any and every in-
cumbance, claim and lien
whateven

For and in consider-
ation of said covenants, sales
assignments and transfers
and of the full and faithful
performance of the agreements
above expressed, said party
of the first part agrees forth
to pay said Francis S. Pope,
J. H. Ashley and Thomas
A. Edison on order, the sum
of fifteen thousand dollars
in payments as follows
to wit: five thousand dollars
at and upon the execution
and delivery of these presents;
five thousand dollars as soon
as soon as said Pope and
Edison shall have obtained
and assigned to said party
of the first part letters patent.

of the United States (four new patents and one re-issue) covering claims substantially as per Memorandum this day furnished by said Pope, to part of the first part, hereto annexed, and the further sum of five thousand dollars in three equal payments to be made on the first days of September, October, and November 1870 respectively.

Second: to perform the agreements heretofore made by the parties of the second part with their present subscribers, to furnish quotations of gold, for one year from the date of each of such agreements, at the rate of two dollars per week.

It is, however, mutually understood and agreed that the parties of the second part have and reserve to themselves the right to manufacture and use and to sell to others to be used each, any, and all of

the apparatus, instruments and methods for which patents are hereby assigned or agreed to be assigned, for the specific purpose of transmitting over what are known as "private lines" of telegraph messages other than commercial quotations of the prices of gold and stocks - but that said parties of the second part will not sell to, use, or allow to be used, any of such instruments or apparatus, except, upon receipt of an agreement in writing to be made, executed and delivered by each and every of the parties who may purchase the same for any such "private line" of telegraph, that they will not use or permit others to use for any other purpose than that for which said particular "private" line for which the purchase is made was originally intended.

And that there may

be no misapprehension as to what is here
in meant by a "private" line of telegraph,
it is mutually understood and agreed
that the following is an example of
one: A.B. being either an in-
dividual, firm or corporation doing
business, has a line of telegraph
connecting A.B.'s offices shops or facto-
ries, or any of them, where A.B.'s pro-
per and usual business is carried
on, such line is a private line, pro-
vided that, the messages transmitted
over it are for the use of, and used
by A.B. only, and not by the public
generally or persons other than A.B.,
his or their agents and employees
in said business.

It is further mutually
agreed that should any of the in-
struments, apparatus or methods
for which patents or licenses have
been obtained, or are to be obtained
and which are hereby assigned
or agreed to be assigned to said
party of the first part, prove a-
vailable for use upon long lines of
telegraph between distant cities the
same may be so used by either of
the parties hereto, but only after

thirty days notice in writing first, to be given by the party so desiring to use the same to the other party, accompanied in each particular case by a statement of the nature and extent of the proposed enterprise, and of the estimated expenses thereof, and also by an offer of option to such other party to come in and contribute one half of the actual cost or expense of such enterprise as a joint undertaking, and that, in case such contribution is, within said thirty days, made on satisfactorily secured, the party so contributing shall be entitled to one half the profits of the enterprise - the object of the parties hereto being to make, if possible, a joint enterprise of each and every undertaking attempted under the terms of this clause of their agreement, and to conduct the same in friendship and harmony as partners.

It is further mutually agreed that in case any disagreement or dispute shall arise between

the parties hereto or their assignees
as to the true intent and mean-
ing of this agreement, or of any
clause or provision thereof, such
disagreement or dispute shall
be referred to the arbitration of
three arbiters, of whom one shall
be the president for the time being
of the Chamber of Commerce of New
York City, and one shall be cho-
sen by each of the parties hereto -
and that the decision of such ar-
biters, or any two of them shall be
conclusive.

In witness whereof the
parties hereto have sealed and
delivered these presents this
day of April 1870

OFFICE OF
The Gold and Stock Telegraph Co.,

No. 18 NEW STREET,
ROBINSON & S.

P. O. Box. 5645.

New York, Dec 7 1870
T. A. Edison Esq

Sir,

Please go ahead
and finish as soon as
possible the arrangement
of two wheels for your
Printer and I propose
as follows. I agree by
means of a new transmitter
or in any other manner
suggested in making you
satisfactory with
your contract as to speed
the use pay you for the
two wheel improvement.
such an amount as you

OFFICE OF
The Gold and Stock Telegraph Co.,

No. 18 NEW STREET,
ROBINSON & S.

P. O. Box. 5645.

New York, 1870
May fairly claim under
all the circumstances, or
discount us to pay. if we
cannot agree we have
can send to you. for
if you cannot complete
your contract without
the device of two wheels
you are bound to give it to us.
then we are to ~~be paid~~
without charge - It is
also understood that if I
wish it we can go ahead &
use the two wheel improvement
without waiting for your
further experiment with a
transmitter - Yours
M. J. Gifford
Pres.

"Larger lines" - after their examination
 if they decide to purchase it. I will
 deliver of the Patent ^{improvements} to them - for a maximum
 sum of ^{\$30,000} ~~thirty~~ thousand dollars - payable
 in stock of your Company - supposing that
 Capital note to us \$125,000 - but ~~if~~
~~the case~~ it can be shown that the instrument
 is not alone I claim for it - or that it
 is our patentable ~~in its parts~~ - I shall
 be willing to discover the ~~price~~ maximum
 price named. and will do what is fair
 in its proper adjustment ^{giving} this Copy
 the right to accept a request ^{as they please} to ~~seem~~ to
 me that this is doing what is right -

Share of the purchase has partially been
used to enter into an agreement, binding
myself. The above sale to be subject
however, to a reserved ^{claiming} right for myself, and
associates - for the ~~own~~ ^{to} manufacture and
use of the instruments and ^{improvements} ~~instruments~~ and
in all Municipal ^{and private} ~~public~~ ^{railway} ~~public~~ ^{lines}. ~~There is~~ ^{There is}
None - Police &c -

Shew the Company purchase the Instrument
now refers to. I will enter into an
agreement binding myself, to offer to the
Govt & the U. S. all of my future

Printing Telegraph Int. or improvements of
 these already in use which I have done
 and which are now being used to extend by the Company.
 and that I will complete all such inventions

or improvements. By a good workable instrument
 which shall be placed in ^{the Company's} hands for
 experiment for 2 months - and if they then
 desire to purchase the inventions and or
 improvements I will sell and assign the
 same for a fair and reasonable
 compensation. Taking into consideration
 which the Company have already purchased
 and are mutually friendly relations which
 I wish to preserve -

Gold and Stock Telegraph Co.

E. A. GALAHAN, Mgr.

New York Dec 1870

T. A. Edison Esq
Newark
N.J.

You will please make
and deliver to this Company one
hundred & fifty (150) Instruments
like those we call the Cotton
Instruments — We will pay you at
the rate of ~~one~~ Fifty eight dollars
each —

Yours
M. Lefferts
Pres.

[INCOMPLETE]

Logan's letter (1970) 2

of that particular case was simply that I had
to agree to give Mr. Galt 1/3 of the interest, after
the you went on representing with Perkins
and as you now inform me, you have secured
and are a few feet later. but they belong to
Mr. Galt & Harrington, with an interest in
the future for property - This you have also
informed me, since all the other rights, but
I am now satisfied of it - but I do see
more clearly, that I should perhaps give
be a very heavy one - My regard for
the name of Dingy, in California has been
over \$25,000. That gives Harwood dollars -
of which amount between \$6700, was added
last year - You have said to me on several
occasions, that no man in this country had
worked as hard and as long to perfect this
system as myself, and that I should make
agreement of it - and I see in this
you do which is right. You should recognize
my early understanding, & I must now believe
to be as knowing as his word -

Yours
M. J. Galt

Every article will be carefully packed. The goods become the property of the purchaser when they leave the store, and for all loss or damage (other than by sea or land, not covered by insurance, he must look to the transportation of the goods, who alone are really responsible.)
 Goods are not insured, except by request, and at the cost of the purchaser.

1870. Telegraph - Patents (D-70-009)

Caveat.

All selected.

Penning, A. J.

187

The object of this invention is to produce two distinct movements at a distant station upon one wire and is especially applicable to that class of Printing Telegraphs which work upon one wire. ~~As pointed out already, if an electric magnet in the main line becomes shorted, the electric current is sent through one of two electric magnets and thence to the main line, the polarity of the current sent causes the switch to click, the current through one magnet or the other~~

A' is the Printing lever magnet and A is the Type wheel magnet. S and S are the Main line wires within which is the Polarized Magnet X X. O and O' are the Keys arranged with the ~~the~~ Battery C in the usual manner for reversing the current upon the Main line - one current throwing the magnetized bar B forward to the point p and the ~~other~~ ~~current~~ ~~the~~ reverse current throwing it to the point p'. These points are both connected with wires to the Printing & Type wheel Magnets thence join together and are connected to the Main line at E. The Polarized Magnet has a very high resistance compared to that of the Magnets a' and a being wound with very fine wire. The bar B is also connected with the Main line by the wire g - It will be seen that when the bar

or longer B is equidistant from the points p' and p and touching neither. The Printing Magnet A' and Type Wheel Magnet A is not within the Main circuit ~~being~~.

Operation

If by depressing the Key O a positive current be sent over the line the bar B will be deflected to the point p. and the current will then split at c. The greater portion passing through the wire of bar B point p through the Magnet A thence to D a back to the transmitting station. ~~But~~ a small portion of the current will pass through the Polarized Magnet X X to D owing to the resistance it encounters through the fine wire ^{and} but sufficient to actuate the Bar B. ~~But~~ not enough to prevent the Magnet A from working. Now if the Key O' be depressed a current of opposite polarity will be transmitted over the wire and the Bar B will be attracted to the point p'

No. 102 NEW JERSEY RAILROAD AVE.
NEWARK, N. J.

Thos. A. Edison

1877

Leaving the magnet A entirely out of the circuit, and allowing the current to pass through the Primary of Magnet A' thence to D in the same manner as before.

My claims will probably be

The Two Magnets A & A' placed within a circuit independent of the Main Current and operated by a Shunt Current from the Main Current by means of a polarized Magnet constructed as described for the purpose set forth.

Signed by me this 17th day of December A.D. 1877

Dear Sir -

I have just directed Mr Williams to send the Voting Instrument by Express with facilities for packing it -

I wish you would prepare the necessary articles for the solution and send it to me by the National Express Company as soon as possible, I would also like to know if you are willing I should proceed to put the Instrument before the public

Your early attention to this matter will greatly oblige

Truly Yours

L. R. Roberts

Am sorry the Boys had to give up as they did, I would rather have given \$50. myself than had them do that

Friend Sir

I have received nothing from you yet. You asked me to take the account due you on your note. I did so and have also written you a second letter in regard to it. My plan of the 12th you say you will send check on receipt of this you will immediately send the funds or write and give me some explanation of the matter. I am tired of writing about it and if you can not attend to it I propose to see if it can be collected.

Yours truly

J. Hammett

1871. Railroad - Port Huron and Gratiot Railway Company (D-71-002)

Correspondence, accounts.

All selected.

T A E

I send you to day a Port Huron paper showing you the Amendment to the St R R Charter which gives the Co the Exclusive right over the Park which is a big thing as the City will probably never open a public St through it. I am building the Car House and I am talking about building many other buildings and laying out a large part of money in building new track also I tell them that it is necessary to extend our road to connect with the Port Huron & Salt River Depot and they all say they cannot stand it it will cost too much they want more dividends and not so much Rail Road. I sent you ^{the} maps of the City of this month and suppose you have got them if not let me know and I will send you more by Express if you can get this sheet taken I think the sooner the better as these parties are about as well as they can be made. I had some talk with Miller and I think for wild pitch him the rails on the 4th of July was \$169.40 as soon as the Light House Reservation is sold the State agency to buy and then a big Sago tree garden which will help the road considerably. Over

tell Chasly to be careful agour round the Engine on the
machinery and not be careless I hope he is not to
much trouble to you should he be let me know
and we will have him come home ^{that I say} tell him
be a good Boy and mind his Uncle we are all
well and send love to you & Chasly

New York June 4, 1897

My dear Edwina

I can get no strength and am ordered to the Country for ten days. I go immediately.

I have concluded that your suggestion that we make one test without waiting for the printer, is the best. If you will have the first recordings, might the writer and stop on automatic attachment, completed we will make the test with little and the a kind of perforators. It will keep he will have one of the long perforators done "very much". I am sick of "kept back" but on what is he expending 4 or 500 per week. What are two good men doing. As there are no orders nor likelihood of work. I give them, would it not be well to stop all work except upon the perforator. When one is completed I even, as a model, I can understand that more men will be required to build a machine. But there is no working model yet. I want to see if I can stand it. It is of no use to make jigs or special tools. To build a large machine, not many, but in dozens but I cannot see what the men are doing. We shall see what progress has been made after 10 days. Yours truly

W. H. Smith

1871. Telegraph - American Telegraph Works - Agreements (D-71-005)

Agreements.

All selected.

Approved by Frederick Spengels aged with American Telegraph Works
to drill holes in box, frame and bars of and Large Repeater 1871.

It is agreed and made this seventeenth
day of June in the year eighteen hundred
and seventy one (1871) by & between Frederick
Spengels of the city of Newark County of
Essex State of New Jersey and the American
Telegraph Works of the city of Newark County
of Essex State of New Jersey.

Witnesseth that the said Frederick
Spengels in consideration of the covenants
and conditions of the fully of the record, here
to be performed to the covenants & cures to
and with the said American Telegraph
Works that he said drill all the holes, require
in box, frame, and bars of the machine
known as the Large Repeater now being
built by the American Telegraph Works
of the city of Newark.

Drills & counterbores to the bar -
Drills & taps on the bar, puts on frame and
puts down pins in each and ready for
drilling - Drills for cross rods six according
to model twenty eight holes in bar and
twenty eight holes in base - Drills twenty
eight holes in back bar and taps on
according to gauge - Drills & taps twenty
eight holes underneath base for springs -
Drills fourteen holes in the end of base
according to gauge -

Agreement to make Perforator parts (cam - rod, sleeve, key ect) by 1871
William Parkinson American Try. & Co.

This Agreement made this twenty second day of July in the year eighteers, hundred and seventy one (1871) by and between William Parkinson of the City of Newark, County of Essex and State of New Jersey and the American Telegraph Works of the same -
Witnesseth That the said William Parkinson in consideration of the covenants and the part of the party of the second part to be performed doth covenant and agree to and with the said American Telegraph Works that he will make that part of a machine known as a Large Perforator - Which shall be designated as follows - Cam, Rod, Cam, Sleeve, part in set screw and pin in sleeve and pin in rod for connection with key all complete as made given. That he shall have the use of Prof No. 19 - Profile Machine, & also No. 10 - Drop & small milling machine Also one kit of tools furnished by company and all tools broken at the expense of contractor. It is to be taken from the tool room & work returned to the same for inspection. The said work will then be inspected &

all imperfect or spoiled work returned
to contractor to be put in proper shape
or paid for. The said work to be turned out as required.

And the said American Telegraph
Works covenants to pay the sum of
twenty five cents each for seven hundred
and twenty eight pieces. And the
company reserves the right to keep
back a certain percentage until
the completion of contract.

In witness whereof we have
hereunto set our hands and seals
the day and year first above written.

Witness my hand and seal

Correspondence.

All selected.

New York Jan 12/77
Dear Mr. Edison
Hurrah for us!
Hurrah for me!

Your notes, like your
confident face, always
inspire us with
new vim

I intend to see you
Friday or Saturday.
I have recorded

your perforations
& you will see that
your arrangement
of dots, dashes and
spaces ~~are~~ not quite
right, but of course
you can easily, I
hope, fix that.
Yours, all the time
to Hiram's

P.O. Box 3237

New York, Jan'y 1871

Dear Mr. Edison

Yours of yesterday
read.

Two weeks ago you told
me you had, in a rough
way, reduced to paper, your
ideas for an Automatic
Printer that would trans-
mit two or three hundred
words per minute, and
you promised to have
the man make full
drawings for your
 caveat or patent.

I then told you that a
friend had caveat'd an
invention for the same
idea, and that as he ex-
plained it to me, it
seemed to me very

likely to work, and that I had thought it best to arrange to control the invention — but that I did not want to have it developed until you had thought over the subject and completed your own drawings and that then I should want you to sit down with my friend and examine your plans with him and after making up your mind as to the best plan to build the machine go ahead & develop the same, and try, at least, to get ahead of Lammie and beat him, too.

There, I reckon, I have complied with your request and given you my ideas in a very explicit way.

I agree with you, fully, as to "Dry Goods clerks or Digger Indians," but you captivate my whole heart when you speak of making machines which will require "No Intelligence." That's the thing for Telegraphers.

I should say that, if possible, we ought to start with a Perforator that will punch any letter when the key is properly struck, and I would say that such a machine, that could be driven up to 25 words per minute, and costing \$50,

Settling
Jan. 1, 1871

would be better for us than
one which should require
thought in the making of
dots & dashes, & working even
up to 40 words and costing
only \$25

How soon can you
give us, (to enable girls to
begin to practice) two perfect
Perforators, and what rate
of speed may we hope for
from experts?

When, in your best judg-
ment, can we have all
the necessary machinery
for, say 4 offices (Ct. G., Phila.
Balt. & Wash.?)

When shall I go to Newark
again?

Yours truly

D. H. Craig

P.O. Box 3237 - New York.

Poughkeepsie, Jan. 31/71

Dear Mr. Edison:

I had your perforations (a & b) telegraphed today, and send you the result. At low speed (say, about 300 words per minute) the writing came pretty well, but even then, the dashes were too short for the dots. When run up to 6 or 7 hundred words per minute, many of the dashes were nearly in two parts, and the shortness of the dashes, as compared with the dots was even more apparent than when the speed was less.

Of course, you will know how best to remedy this trouble, but my way would be to increase the size of the dash holes about $\frac{3}{8}$ the

and so arranging as to have the dash actually lengthened, say $1/8$ " or $1/4$ " and throwing the other fraction in to assure continuity thus $\square\square$ You now have it thus $\square\square$ and the result, in rapid recording is you get it thus ---, which, I am sure, you will say is not exactly according to Genster or Edison.

I hope that not a single hour is to be lost in giving us a complete Perforator for practice, and all possible speed should be applied to the completion of enough for the Washington line. I presume Mr. Harrington would agree with me that 15 Perforators would do nicely, and 10 might answer, & should, if he added 5 would prolong the completion of the 10 to any extent.

Please explain to Mr. Harrington

that you can make a note form printer at short notice, and that (working ~~fast~~ a type wheel it must print faster & much better than can possibly be done by the levers or arms plan of Sholes. My idea is that it is a decided object for us to have the control of the Sholes machine, provided it cost little or nothing—but if not, not—and of course, relying upon your inventive head to work us through when and as may be necessary.

I hope you will make sure that our friend Wixie don't take the least amount of push off of the Percher. That, fully & successfully completed is a thousand fold more important, pecuniarily, and

W H Cressy

Jan 31, 1891

in every other way, than
all the gold machines ever
made or dreamed of.

The next big thing is the little
Automatic "Recorder" (I think
that will do "for high" till you
find a better ~~one~~ one) and
pray don't ^{let} out the opposition
so nicely, that we cannot
do better. I rely upon you upon
this point, and if you do not
let us slip up, you will assure
to yourself a big pile of profits
every year and a good deal
more than the Callahan hounds
would pay you for your brains
through your natural life.

I have not yet had an
opportunity to talk to Mr. Harring-
ton, but I shall not forget not
neglect the point, as my heart and
judgment is in the arrangement
I suggested. It shall be Truly, & W H Cressy

P.O. Box 4 323 = New York.

Beekskill, Feb. 13/71.

Dear Mr. Edison -

I gave, a few days ago, a letter of introduction to you, and when my big-bellied (but none too big for his head) friend calls upon you, I shall feel personally obliged if you can devote a few moments to him. He is a great admirer of good machines and good work, and I believe he has very few equals in the iron foundry business. He carries in to that business a good deal more brains than would be necessary to run the White House in first class style and effect. If you should see fit to give him your casting

business, I am sure he will do it to your satisfaction, so far as you may give him your wishes.

I do not want you to work, or think of work, over 10 hours out of the 24, but I do want to have my head put at rest in the matter of the "Automatic Writer" [How'll that do for a name] desperately, and if you should ever feel as though you wanted to be praised for, you can secure a first class testimonial if you will tell me you have done it. I fully believe you will do it, if you live long enough, - indeed, if you

should tell me you could make babies by machinery, I should not doubt it.

As the machine was invented and patented (at least, in part, I presume) years before you had your first dealings with L. or the G. & S. Co., and as we all want to be at peace with L., why would it not be legitimate for you to ante-date a bill of sale to some suitable person & then let him convey to Harrington for the Am. Tel. Works Co. Of course, you are to be paid specially for the invention.

If one could commence on the Domestic business in Competition with Ashley very soon, I would like it very much.

Will you write me as soon as you have anything to say,

W H Gray

Feb 13. 1871

and on no account, I beg
of you, delay the machines
for the full test of Automatic
Telegraphy. As we discard
Sholes, we shall, of course,
feel a deep interest in your
proposed Printer, and I beg
you will consider, whether
it is possible to use the upper
& lower case letters of about
the size of Pica type, or a size larger.
I would say that for general
purposes a machine that
would print this, nicely, 35
words per minute would
be more valuable than
one printing all caps that
worked up to 50 words
per minute. Of course,
caps alone will answer
our immediate purposes
nicely, particularly, D T Hoag

Peekskill, Feb. 18/71

Dear Mr. Edison:

As you have not given me your promised note I suppose you have not yet got out of the woods on the Automatic Writer—and the thought makes me feel very sad.

I have been quite sick with inflammation of the lungs, and at one time thought I should have a very serious time—but I am pretty well, today, & hope to see you soon.

The Turkish Consul has talked to somebody, who thought it of sufficient interest to have it repeated to me, in a very

to lead to the conclusion
that some of the Gold and
Stock people were using you
to set the Gold, Exchange and
Stock business in opera-
tion in Constantinople,
London, Paris, &c.

Of course, it is none
of my business what
you do for such a ven-
ture, but I would like
to be kept posted. One of the
Automatic Telegraph people
shall, as soon as we get
fairly afloat here, go vig-
orously at work to
utilize all we may have
on the other side, and
I only hope that as
Harrington fully
appears with me that
you are to be with us

and of us, in all Telegraph
engineering, you will
keep us as carefully in
your mind as we
shall certainly keep you.

I think we shall want to
patent your Repeater and
your Perforator and
Printer (note paper), in
Europe

If you are not fully posted
as to what is going on by
the Turkish Consul, Laros, or
I wish you would get booked
up, & let me have the story.
The Turk says the machine
will record Chinese, Japan or
any other Language. I take
it there is no other machine
that will do that, but yours.

Yours truly

D. H. Craig

Peekskill, Feb. 25, 1871

Dear Mr. Edison:

Mr. Grace wrote me that Mr. Harrington was going to Washington yesterday, so I reckon you are having no bothering, & I should not wonder if you wished I might be sick a month longer and Harrington be put into the Washington Penitentiary for at least that length of time.

On Tuesday next, weather permitting, I propose to bring a townsman, Mr. Anderson, to you for you to examine what seems to me [very poor authority] a good beginning for a first rate Perforator, for Herschell's use. Harrington has been negotiating with Anderson for several weeks or months, & has got to a point where, if you think the machine of real merit, or that it could be made of any use to a party who should

Henry

undertake to run opposition
to us, we are to put it into your
hands to develop, for our bene-
fit & control. We shall try to
get out in the 11 o'clock train, and
will go direct to your shop, and if
you think best to let Huger see
the machine (a full working
model made very rough) let
him call there on his way to
dinner. Anderson is an artist
(painter) but belongs to a family
of very ingenious people - his
father a machinist and as he
had never seen or even talked
with any person knowing any-
thing about Perforators, I think
you will agree with me that he
has produced a very creditable
machine. I doubt you can
greatly improve it, and as we shall
get the benefit of whatever merits
it possesses, I hope you will be
able to find time to give it a care-
ful examination, and tell Anderson
kindly & moderately what you think
of his invention. I hope you are getting
some results. Truly, a D. H. H.

Pekskill, Mar. 16/71

Dear Mr. Edison:

By doubling the Perforated paper you will see that ordinary pens or ballpens would not by considerable make dashes. What I send is you it on "Mississippi". To make a dash, the upper hole would have to be at least $\frac{1}{32}$ " larger. To make sure, it should overlap the two lower holes as much as the thickness of three thicknesses of thick writing paper.

Would it not be possible to have the 3 keys so arranged that you could depress ~~the~~ whole three at

once? I think you
struck two at one time &
one the next, to make the
dash. I did not see you
make the long dash at
all, but I suppose it is
there.

If you don't let me
see your Perforator and
Printer working soon,
I think I shall hang my
self - for things are
getting too hot. I am
too much a subject
for commiseration
on the part of my friends.

I shall try & see you
on Saturday.

Truly
D. H. Gould

Peekskill, N.Y.
Mar. 29/71

Dear Mr. Edison:

Halt made for us, in March, 1869, a working model of the Little Motor and Printer, and Tablet.

In Jan. 1870, after Little had considerably changed all the mechanism, Hall & two other men, went to work and made Ten of each in 13 weeks, and Hall himself did not work on the machines over $\frac{1}{2}$ of the time.

I asked your foreman today, how long it would probably take to make 4 more Repetitors, supposing the present one was permitted to be all right, and he almost

D.H. Craig

Peekskill, May 11/71.

Dear Mr. Edison:

I have your note.

I expected & desired you to be interested in the process for Insulating Wires, if there was anything good about it, and I feel so now, and you can judge better than I can as to what answer I ought to make to you about giving up the wire covering machine. If I was not at the moment so devilishly hard up, for money to keep half a dozen valuable things moving, I should not say a word but pay all expenses of machine & everything else, and

NON Coraury
Mar 29, 1891

took my breath away
by saying "about three
months"

Surely, there must be
some grievous mistake
about this.

He said working draw-
ings could be made from
the machine, in a week or
less, so that one could take
the machine away for
practice and I hope you
can confirm this.

Are you absolutely sure,
from your own personal
observation, that all is being
done that can be, to expedite the
completion of our machines?
The 3 weeks of January have been
in to three months, and as I know
we are all suffering terribly by
the delay, I feel as that I must
ask of you, at least, if it is of course, and
to be sure you are doing all that you can to help
to be sure this out is hastened. Truly, & Affly

push right on with the
insulation of wires.

I was sorry to have
more than a few dollars
expended to give me enough
wire for a simple test,
but as you acted as you
thought for the best, I have
not a word to say, ex-
cept that I will, before a
great while, pay all expenses,
provided you think our
real interests will be
promoted by having the
use of the machine - but
if you think that is not
material, then, for your
convenience as well as
for mine, I would like
you to get your pay as you
suggest.

I am very busy in other
matters just now, I would be de-
lighted to know from you, just how
automatic machines now stand. Truly, & Affly

Craig

Peekskill, May 14/71

Dear Mr. Edison:

Our little philosopher, the Great Little says our Paraffine insulation will not answer because it in a peculiar degree, operates to retard the Current! As he also said your three keyed perforator was a very complicated & expensive affair, and that your big Perforator was merely a poor imitation of Lickatstone's, his insulating story has not made a very deep indentation into my heart - still I would like you to tell me if there is a bit of truth in what I say.

Blank No. 7.

THE WESTERN UNION TELEGRAPH COMPANY.

The rules of this Company require that all messages intended for transmission, shall be written on the message blank of its Company, under and subject to the conditions printed therein, which conditions have been agreed to by the sender of the following message.

THOS. T. ECKERT, (Capt Sup't),
New York.

WILLIAM ORTON, Pres't,
O. E. PALMER, Sec'y, New York.

Dated

187

Received at

of J. A. Edison

At Mr Craig request I have sent you a Printing Machine upon which I was working some years ago & nearly completed. I was obliged to take the train before I could have it weighed & charges fixed upon it from Buffalo. or I should have paid them in advance. I hope to be at your place in a few days & we will

having any interest
in your operations
because I do not bother
you personally. I have
been very busy about
other matters, and am
getting ready for active
business as soon as you
can give us the needed
machines. I am not
quite sure but that I shall
have to take a hand in the
new business even before
we get the new telegraph
system to work, as I am
hard pressed by some of
my friends.

I shall try to run out
your on Tuesday
and can tell you
if you have any, what
I want to see of them

Back the thing
over

Yours &c

C. S. Jones
Albany May 25, 1891

Peekskill June 8th.

Dear Mr. Edison:

Being pretty busy and short-handed here, & nothing to do in the city, I don't go there much now-a-days, and did not see your small perforators till today, at 66. Mr. Darron tried to work them, but it was impossible, and he could not perforate two words consecutively to save his soul. I think if those machines are to be at the office, you should go in & teach Darron & Grace how to use them, as they now reflect upon & disgrace on all concerned. Even when, by possibility, Darron could perforate 4 or 5 letters consecutively, the spacing was fully bad, as you will see by what I send you. I do not know what the word is, but

I recd. at Darrows said the two first letters were B. A. and the last, M.

If you cannot spend time to show Darrows & Grace how to work the machines, do pray have them taken away, for they seem to justify Little's foolish spite when he says Harrington and Edison is simply fooling away time and money to no good purpose.

Why, the deuce don't you let me know how you are getting along. When are you going to have some thing to show in the way of the new Perforator & Printer.

I hear the M. M. Co. have swallowed the G. & S. Co. I hope you have sold your stock.

Harrington, I hear, has gone to Saratoga, to be back early next week. Don't be rough on your poor friends, & let me hear from you upon all points,

or, what I would like better, come here Saturday, and be happy, for one day of your life by breathing fresh, cool air, filled with the perfume of a thousand delightful odors. We are in the midst of Hazing. Write me if you will come by the 4 p.m. train, Saturday & return when you like next week.

Capital place to Loaf!

Truly yours,
D. H. Coe's

Don't forget several sam-
ples.

P.O. Box 2237 - New York.

Pekskill, Sept 26/71

Dear Mr. Edison:

I want you to give me your own suggestions as to an arrangement for the introduction of your machine, but as you asked me to tell you what I thought was right, I will do so, to a certain extent - but first, let me tell you what I can do:-

If you will furnish three or four machines, I will have good wires put up in the city, & provide three good offices where the machines can be thoroughly tested, and if they work satisfactorily, I can raise in a single day, all the capital necessary to pay for the manufacture of all the machines that can be introduced, and to build all the lines we can find a use for.

I will undertake that you shall have cash and liberal pay for all the machines that can be introduced, in all the cities.

I will also guarantee my undivided and best efforts to work this business up, - will furnish all the capital that can be judiciously used, and give you one half of all the advantages I may obtain in connection with the business, - and I firmly believe I can make your interest worth at least \$5,000 per year, & probably much more.

All this I can do at once, & without serious trouble.

Of course, I can raise some money beyond what I have above stated - but that will

be a real trouble, & I hope you will not feel that you ought to put a very heavy load on to me. I have done all in my power to promote your interests during the past year, and expect to continue to do so for many years to come, and our appreciation of your great abilities has certainly not had a tendency to lessen the appreciation or liberality of Lefferts & his company.

Any kindness that you can feel justified in extending to me, will not be wasted. I claim to have more real hard work in me than any other ten men except, only, yourself, - and I have all the ambition in the new field that you could possibly desire me to have.

Truly, be D. M. Davis

P.O. Box 3237.

New York, Sept. 27/71

Dear Mr. Edison:

I have just learnt of an entirely new movement for a strong opposition to the E. & S. Co., and I am sure you ought to sell your stock. There is intense hostility to the Co. & all the more since the E. & S. Co. swallowed it, and any party of common sense with any decent machine can render the Co. powerless to pay another dividend.

As I have not yet got the promised specimens of your Printing (I want several short messages for interested friends) I suppose you did not get your machine up as expected, yesterday.

Yours very truly,
W. H. Paine

Pekskill, Oct. 3, 1871

Dear Mr. Edison:

In thinking over your talk, today, I am moved to write you my reflections.

First, let me say, that it seems to me your programme is not calculated to advance the immediate introduction of Heterodyne Telegraphy, — you are proposing to travel over, substantially, the same ground as Lifferts, Little and I travelled over over many times between 1868 & 1870. We reached perfect Thomsonism at any speed up to 1000 words per minute, and also the most perfect recording, both on iron (permanent) and platinum, (fading) paper-marks. Our great

months, a year ago, were a
rapid perforator and a good
copying printer. I take credit
to myself for having dis-
covered in you the genius
we required, and I hope you
will not refuse to let me sug-
gest to you the proper way to
utilize your great inventions.

We want to give the required
confidence in our new system,
the Edison perforator and
printer - nothing more, and
we do not need 48 hours to
illustrate all we need to il-
lustrate, after we get machines
for Mr. G. Balto. & Wash. of-
fices.

I know, of course, that you
have many successful capital
things to bring in to improve
our operations, but I am
sure we ought not to be

delayed a day or an hour,
in doing ^{what} ^{at the aid of your}
^{so} ^{printer.} There
is ^{of time for you to}
need & develop your ideas
after we prove to our im-
patient friends that we have got
a practical working system.

I know there is the most
urgent necessity for immediate
operations by the Co., and as the
time is now all right, I
hope you will bring over
the perforator & printer &
spend all the time needful
in the office to have them
well-worked, and then we
can have a full test and prove
all we need to prove to as-
sure the complete success
of our enterprise. So, pray,
use your influence to have

10 March 1877
Dear Sir

no more time lost
If we stain
fingers in
the great mass
have them save
out to the Governor
& Breckins. They are prepared
to spend \$10,000.00 if ne-
cessary, and Orton expects
to go in to the Cabinet and
will be the Engineer of the
impudent project. Do, pray
urge and aid Harrington
to get full tests this week,
or at the earliest possible
moment.

I cannot use that sample
of Printing, as it is full of blun-
ders. Will you not oblige me
with several perfect & clean
nice samples, soon.

Do not delay telling me what
I may do about the Domestic Telegraph
scheme. I will do you no harm in trying. R. H. Davis

How about the gas meter?

New York Oct. 6/71

Friend Edison:

It is now nearly two weeks since you promised to give me your ultimatum in regard to the Domestic Telegraph invention, and I have not a word from you, yet. I certainly think this is cruel. You say that the G. & S. Co. have no right to the invention and that you can arrange with and through other parties, so that you will not have any trouble with the Co. Whatever I now do is to insure to the benefit of the Automatic Co. of which you are director, no doubt, to be a very large stockholder.

I beg your will say something decisive at once — if you are not willing I should

carry out the programme
which I had supposed was set-
tled between you and me
a year ago, you have only
to say so, & I shall not annoy
you any farther. But say
yes or no now.

Sholes has very greatly
improved his printer, and
it now does such work as
I include right along, and
I have no doubt an expert
can average 50 words per
minute & change the paper
besides. —

I strongly advise that you
should not hold the divine
argument beyond what
is necessary for you to test
your Perforator & Printer.
We have absolutely perfect trans-
mitting & Recording devices,
and at the present moment
it will make serious trouble
with Bittle, if he sees an effort
being made to supplant him

in what he justly regards
as a discovery of the means
of very rapid & correct
telegraphing. We cannot
afford to have any wrang-
ling. By and by it will be
in order to make im-
provements in the Little
System - but we are now
in too much haste for
practical work, to afford
even one hour for any
unnecessary bickering. Give
us Preparations & plain
Print. There is glory enough
in that for a whole
lifetime.

The M. C. are very anxious
to know our secrets - and I sug-
gest the utmost care & prudence
to keep every part of possible
value from their legsions of
spies. They begin to see that we
are not the kind of fools they said
we all were. Sincerely D. H. Davis

- 13 Cable boxes & lightning arresters on No 1 are very dirty full of spiders webs wasps nests etc & want cleaning gone thru partial cleaning only, not having tools or time to do survey. Style of arresters Common screw pattern with ground plate between screws
 Think at least ^{at least} 2 extra poles needed to give certainty to wire during summer. Think about 2 poles might be moved to give us a direct to avoid crossing O & L on McWhorter & very St. Newark it is very bad place & wire crosses O & L twice at that point. ~~more than once~~ also give us straight route
 Wire crosses on Perry & McWhorter in Newark more than once ^{bad place} very likely to cause trouble out of direct route & ~~runs thus~~ think by moving 5 poles up on more direct route we could avoid crossing O & L there at all. Our wires run very indirect through Newark over two miles out of direct line but this crossing is in very bad place
 Pole on Hawthorn ave 4 ft out from sidewalk & should be moved back. Point on ~~intersection~~ ^{Elizabeth Ave} wire crosses under Elizabeth Ave 2 poles to move another point beyond waning gate track wire runs through tree pole to be moved & another set. Two poles near ^{from} house stand outside walk & must be moved
- 15 Total No Splices in No 1 wire about 200
~~About 40 in many~~
 Average of New ~~and~~ poles 90
- 16 Sharp turns McWhorter & Perry St. wire touches pole where it has been moved by street construction there are 3 points on County road near waning where it

makes sharp turns but wires cannot track poles
17 wire does not run over hump tops on my section

Dear Sir,

I have the pleasure
(with your permission) of introducing my
ingenious friend Mr. Thos. A. Edison,
the bearer of this, who is worthy of
the kind consideration which I am
sure you will accord to him.

Mr. Edison is prepared to confer
with you on the subject to which
I alluded on Thursday last.

Very Respectfully, Sir,
Yours Wl. Edwards
Tracy N. Edison

New York, May 27th, 1871.

To the Stockholders of the Gold and Stock Telegraph Co.

At a Meeting of the Board of Directors of this Company, held May 20th, 1871, the following Preamble and Resolution were unanimously adopted, viz.:

Whereas, Negotiations have for some time past been pending between this Company and the Western Union Telegraph Company, as will more fully appear by the Report of the Committee appointed for that purpose, this day submitted to this Board, and which negotiations have resulted in an arrangement between the two Companies, whereby certain important advantages are to be secured to this Company, conditioned upon the increase of its Capital Stock from One Million Two Hundred and Fifty Thousand Dollars, to Two Millions Five Hundred Thousand Dollars, and the issuing by this Company to the said Western Union Telegraph Company of One Million Two Hundred and Fifty Thousand Dollars of the said increased Capital Stock.---Therefore be it

Resolved, That in the opinion of this Board it is desirable that the Capital Stock of this Company should be so increased; and that the President be, and he is hereby authorized and requested to take immediate steps to get the consent of the Stockholders to an increase of the Capital Stock of the Company, One Million Two Hundred and Fifty Thousand Dollars, thereby making the entire Capital Two Millions Five Hundred Thousand Dollars.

The arrangement above referred to is one of vast importance to the future interests of this Company. It contemplates removing our only formidable competitor, and converting it into a powerful ally, by securing its co-operation and facilities for extending our business to all the cities of the United States.

It provides for the relinquishment by the Western Union Telegraph Company of their Commercial News Department business, and the assignment of the same to this Company; and, also, of their valuable Patents for Printing Telegraph Instruments, specially adapted to our business.

They also agree to abstain, during the term of the proposed contract, from the distribution of Commercial News and Market Reports, and from Private Line, and all other business excepting their general business of transmitting messages for the public, thus securing to our Company the practical control, throughout the United States, of all branches of Telegraph business other than that to be retained, as above referred to, by the Western Union Telegraph Company.

The arrangement also provides that Fifty-eight (5800) Hundred Shares of the Stock to be issued to the Western Union Telegraph Company in payment for the property, business and rights sold and guaranteed to this Company, are to be assigned to the Gold and Stock Telegraph Company for working Capital.

The proposed increase of the Capital Stock will require the written consent of the holders of two-thirds of the present Capital Stock.

A Form for the required consent is ready for signature at the Office of the Company, No. 61 Broadway, and you are requested to call and sign the same.

Very Respectfully Yours,

MARSHALL LEFFERTS,
President.

Saturday June 10 1871

8³⁰ a.m. at Test room - Took the Inst that Prince just fixed to Kent & Co placed it in the Circuit had considerable trouble with paper hangers on account of one being longer than the other - imperfection in casting. fixed them OK - Inst worked all right - ~~Shade~~ Shade wanted for this Inst -

9⁴⁰ a.m. Went to Test room got a Shade & at 10 a.m. at the request of Scott started over Cotton wire visited Kent first and fixed the Shade - not being acquainted with the route of the Cotton wire it took me an hour & a half to find all of them - Every Inst working satisfactory except Niemanns which wanted Ink - which I put on & it went all right - Johnson & H. Complain that reports of transactions in N.Y. are behind 15 to 30 minutes & while I was standing by the Inst it commenced recording the 10¹⁵ a.m. Transactions which were 3 minutes late, it being just 11 a.m.

11³⁵ at Test room Sent a msg to Ludwig notifying him of above Complaint Then went to see Prince & hurry him up on the 2d machine for Prod wire 12³⁰ Complaint from Patman & Co went there

found spring of printing lever weak and Inet
needed oiling fixed it so that it went all right
1 P.M. Dinner

1:30 Prince still working at Inet - Everything
going smoothly -
2:00 got the Inet from Prince & placed it in
CKT - works first rate requires no adjustment
Battery made up fresh this a.m. -

3 P.M. Visited Kent & Co - Inet had thrown
out once - caused by transmitting opr -

Fatmans Inet going OK -
Remained at Post room till 4:30 when all
hands left - Callahan said just before
leaving would want me in the Long
room Monday & several days after
to learn tapping reports - Said Scott would
attend to Cotton & Prod wire meantime

So ends the first week

1871. Telegraph - Patents (D-71-018)

Correspondence, caveats, bill, receipt.

All selected.

To whom it may concern
Be it known that J. Thomas A. Edison of the
City of Newark Essex County New Jersey have
invented a new and useful Machine for
perforating Paper for Telegraphic uses and that
the following is a description thereof so far as
I have developed the same

The object which I desire to accomplish with
this machine is the perforation of paper such
as is ordinarily used in telegraphy for the receipt
and transmission of messages which perforations
corresponds to the dots and dashes used in the
Morse alphabet

Sheet I shows a front perspective of any apparatus

Sheet II gives a rear view of the same and Sheet

III shows a vertical cross section of the same

Exhibiting the construction

The motor power and its appliances are attached
to the Frame I the top or bed plate of
supporting the other mechanism

The form in this machine is taken from a cam
roller A & driven by a gear and pinion the
whole being operated by foot power or otherwise

Immediately above this cam roller in the table Δ on the
ways "B, B'" in which works a slide for holding & moving
the paper which slide is connected to the cam by means
of which a reciprocatory movement is obtained upon this
slide "C" I have shown a head or stake G to
which is attached a gripper sliding vertically

in boxes "H" "I" and when operating is kept firmly depressed upon the paper. C by means of the spring "J". The under surface of this gripper is roughened so as to take firmer hold upon the paper. This gripper may be temporarily released from contact with the paper by means of the nut "F". "D" represents a die plate perforated with large and small holes so arranged as to correspond to the characters of the Morse Alphabet. These holes and the punches working in them may be of any desired shape round square oblong or otherwise. The plate C is also perforated to correspond with the holes in the die and both are securely fastened together and to the bed plate between the dots C and D. There is a space of sufficient width to admit of the passage of the paper. The frame "B" carries the punch heads E, E, and guides this operation by the stems L. The punches "J", "J" are firmly set in the heads "E" and pass through the guide plate "G" into the die "D". The stems "L" pass upwards through the frame "B" and have cross head "F" connected with rods "K" which pass down through the Bed plate "A" and are actuated by the Keys "M" and levers "H" to depress the punches and guide rods are provided with springs "N" which sustain the punches and are beneath the table "A" is placed a bar or stop "M" which arrests the downward movement of the levers M upon the punch head "E" are shaped projections of the gripper

"T" is provided with a pin Y which in the forward and backward movements slide acts on the cam J moving in and direction it passes the punch down returning if any punch should happen to remain down it would be the pin X passing under the cam J. The operation of the chain is as follows the cam Roller being put in motion starts the paper carrier the desired letter is depressed until its lower stroke the stop "W" which lives punches just out of contact with the paper and bring the cam I down to a point where the pin "Y" will just catch on or above the lower point of the cam when the spring "V" being stiffer than the spring I the pin Y will rise of the cam I and raise the gripper to be raised to a point where its further upward progress is resisted by its shoulder "R" against the lower box "H" when it holds down the paper released and at the same moment the pin "Y" passing over the cam "J" forces the punch down through paper and holds the paper in this stationary position until the pin "Y" has passed entirely across the cam which allows the punch spring back to its original position simultaneously with which movement the spring "I" being left free to act forces the gripper down upon and firmly holds it until it comes to the next letter to be punched the distance travelled by the paper carrier after the gripper has been raised in passing over the cam before it again resumes work carries forward with the length of the letter itself and one space between letters such distance being governed by the variable length of the cam "J J" thus constituting a feed which corresponds with the variable length of the letters of the alphabet. A variety of devices may be applied to this machine through its various parts for the accomplishment of the same object.

The place of a cam ¹⁵⁰million may be communicated to this apparatus by using a lever pivoted between its ends one of which is operated by a cam on eccentric and the other device the paper carries the same movement might be obtained by using a double rack and pinion Other devices for holding or confining the paper driving its transit backward and forward can be used in place of the slot &c I have here arranged the punches and dies in consecutive order in the same relative position in which they would appear in a word printed in this alphabet but the machine admits of the punches being arranged transversely to the paper—

which arrangement economizes space movement

The cutting Edges of the punches can be made in any desired form

The punches of the same letters may be so arranged that they may have variable length

Such arrangement produces a shearing stroke inasmuch as but a single punch penetrates the paper at the same time thereby requiring less power to operate it

105

By substituting small and few die cuts in the place of punches and die on an embossed letter working against a pad in place of the die plate the same apparatus may be used for embossing paper for telegraphic purposes in any of the ways and by any of the before described

By arranging the punches in two rows so that the punch standing in one rank shall exactly cover the interval between two of the opposite rank

The number of punches may be greatly reduced and all desired letters characters figures &c can be made by combinations of punches standing in the same line with each other or with those of the opposite line thus if I wish to make a dash I use for instance the first punch in each line giving this result

this perforation would represent the letter "d" I should have

None of these sectional punches thus be made to do the work of twenty seven as previously described. They may be operated for the first partial downward movement before the paper gripper comes to act on them by the direct pressure the fingers or a lever may be attached to each of them and extending horizontally backward is pivoted at the other end. Keys to act upon these levers are so constructed as being into action the particular punches or combination of punches desired to perforate any letter when by means of these keys this acting and a combination of these levers the corresponding punches are depressed so as to bring the cams or projections on their faces into action with the cam on the gripper the same

result is accomplished as by the first described operation in this case the relative positions of cams & pin are transposed a long inclined cam taking the place of the pin & each of the punches having a pin upon which the cam operates the parts of the keys which operate on these several levers are made of variable length to accommodate them selves to the difference in the arcs which the levers at work as radii would describe

My claim will probably be

First to the paper clamp reciprocating with the paper contiguous to a range of cutters and operating the cutters simultaneously by withdrawing of the clamp from the paper so that the paper stops while being punched and is then grasped again second to the cutters arranged to perforate in two rows on the paper this to the finger keys acting to bring the corresponding cutters into position to be acted upon by the reciprocating slide and paper clamp

Printing Machine

The object of this invention is to print with ink Roman Letters in Manuscript form on a continuous Roll of paper automatically. The invention consists in the combination of various Mechanical movements and Electrical devices to accomplish that end.

Fig 1 Represents the various devices combined to make the machine in this drawing I have omitted the several key of the key board and their parts and only show one key so that my drawing may be more clearly understood,

A is the Type wheel Shaft Running in bearings in the frames C, D, & E. B is a friction pulling rotated by foot or other power, and carries the Type wheel Shaft A and used by friction,

F is the Type wheel L is the guide disk both being secured to the sleeve 32 and slide freely on the shaft A. Between the flanges G & H and are prevented from turning by the guide wires M' and M secured by the flanges or arms G & H which are secured to

Shaft A. K is a fork piece secured to the rack bar P, and carries the Type wheel along the shaft A when the rack is moved. I is the ink roller J the arm which holds the arm moving freely in one position on the rack bar P. 12 is a bevelled fork piece pointed on the reel 38 which works up & down in the bearing 13 & 14 its lower end connected to the shaft 15 by a link secured at 30 and working in a

Slot at 37 projecting out from the shaft is are two arms 17, 18 extending across beneath the Key, from 17 to 18 is a bar 16, so that when any Key is depressed the bar & arms 15 & 16, 17, & 18 will be lowered and consequently throw the rod 38 upward the points of the Bevelled fork entering between the frame D, & the pin, 10, upon the rack feeds it forward. This carries the type wheel forward by means of the forked arm, 11, acting on the click 12 - when the Key rises the arm, 16, rises by action of the spring 19 and when depressed again the bevelled piece 12 will enter between the frame D & another pin upon the rack, and so on until the type wheel reaches its limit near the flange H when the pin 8 will knock the catch 9 upward & release the rack and the weight 39 acting on the card 7, and roller 2 draws the Rack type wheel & device Back to 6, when the paper has been fed one line ahead is ready to proceed on another line 4, 5, & 6 are bell attachments for notifying the operator when the type wheel approaches its limitation stop 23 is a magnet operating the printing Lever 25, 25' 26 is the pad 23 the armature 27 the spiral spring for adjusting 28 a thumb Nut for adjusting Spacing from a. the continuous rail passes between the sides 25 & 25' over the pads 26 to the paper fed not shown in this figure when the Type wheel has been stopped at any desired letter and the current allowed to pass through the magnet the printing Lever pad & paper is brought to the face of the Type wheel & the impression of the letters is made. The Electric circuit is so arranged that no Efflu-

No 1

Printing Machine

Current can pass through the magnet and effect the printing until the Key A has reached the limit of its downward depression and the type wheel & shaft comes to a dead stop, this is effected by breaking & closing the circuit in two places I will now explain the manner of stopping the type wheel & shaft A and the closing of the circuit to effect the printing

R is the Key working freely on the shaft T, and connected to the upright Q by a slot & pin S, so that when the Key is depressed the upright Q is thrust down with it, a flat spring underneath the upright Q throws it back to its normal position when finger is raised from the Key. V is a shaft in center screws 2 & 3 in the bearing Y. U is a slot piece connected firmly to the shaft V having a slot in which a pin from the upright Q works. W is the arrestor piece secured firmly to the shaft V. X is a pin on the revolving shaft A placed upon it in such a position that it will when acted by the rotation of the arrestor W in its path bring a given letter on the type wheel beneath the pad for printing when the Key R & upright Q are in their normal position the arrestor W is thrown out of the path of the pin X, and the type wheel ^{shaft} A is free to revolve but when the Key is depressed W is thrown into path of X and the shaft arrested but the pulling B continues to revolve the shaft A being carried around by friction, this effectually prevents a rebound of the shaft

20 is a connection Spring 21 a Post having a Platinum point this Post is insulated from the base the Post 21 is connected to one end of the magnet 22 and thence to the binding Post 29 to the Battery 40 from the other end of the Battery 40 to the contact Spring 0 also insulated This rests on the Toothed wheel A, the completion of this circuit is made in this manner when the Key R. is depressed the piece 16 is lowered and brings the points 20 & 21 in contact closing the circuit at this point, but the circuit is still broken at A, and 0 or in effect the same as breaking C₂ is only closed when the shaft A is arrested and the point 0 rests on one of the metal teeth of the wheel A, then the circuit proceeds from Z of the battery 40 to the Spring 0 thence through one of the teeth on the wheel A to the base or instrument to the point 20 thence to 21 through the magnet back to the Battery, if now the Key is raised a very short distance the circuit is broken at 20 & 21 but the type wheel shaft, A, is not released until the Key has nearly regained its normal position, this allows the printing Lever to get out of the way of the Type wheel before it starts C₂ also insures the stoppage of the Type wheel before the printing can be effected I will mention here that the circuit is not altogether broken ^{at} Q & A but the current is so broken up by the great number of Contacts that it will not affect the magnet even if this was the only point where the circuit is broken, but will only do so when the wheel is arrested for one instant

which allow the magnet to regain its full strength,

Every time a Key is depressed the rack is fed along carrying the Type wheel with it the length of a Letter, until it prints a full line when the pan 8 automatically throws out the Lock pin 9, and allows the weight 39 to pull the Type wheel back to its normal position ready to go on with another line, Fig 2 gives an end view of the arresting device Key Rack feed Lever etc

Fig 3 gives a view of the principle of the rack and automatic release, P is the rack 10 10 the pins 43 are ratchet shaped teeth filed in the top of the rack wire, and are used in conjunction with the pin 9 to prevent the weight pulling the rack back after it has been fed one or more Letters ahead by the bevelled fork 12 --- 52 is a square bar sliding back & forth in the frame D and has two cams with 53 & 54 so that when the rack P has been fed forward its full length the pin 9 strikes the Bar 52 it throws it forward & cams up the pin 9 out of the ratchet and the weight pulls the rack back its full length or such length as may be desired when the rack has nearly finished its back movement the pin 58 knocks the slide bar 52 back and cams the pin 9 down in the ratchet teeth ready to hold it for the feed. 60 is a flat spring for holding the pin 9 down in the ratchet teeth

I do not wish to confine myself to printing on manuscript as the rock and slide. Types wheel carried be disengaged with and the Types wheel secured firmly to the shaft A and a narrow printing Lever used and character impressed upon a continuous strip ribbon of paper similar to that of a printing Telegraph machine.

Fig 4 Represents the paper feed, G is a shaft working on centers in the frame D, F, E, M is a shaft extending C, to B, to secure the middle click E upon all of the devices shown and secured to the shaft G and rotate with it except the click H & K which are for the purpose of preventing the paper from coming back after it has been fed ahead D E & F are the paper clutch click A A A are stages for supporting the paper & click L is an arm having a slot in which the pin M works, N is the Key for feeding the paper when this Key is depressed the arm L is thrown upwards & the shaft G and all its paper clutch devices are thrown forward and the paper is fed ahead the length of a line the clutch devices when returning their normal position would pull the paper back but that is prevented by the clutch H & K which are dependant of these devices my claims will probably be devices for arresting arrangement of current & magnet for printing - paper feed - Rack operated by depression of any Key & toothed connection wheel on the shaft

No. 7

The cross shaft V operated in certain operated as shown,
Combination

My claims will probably be
set to a Type wheel by power and arrested the
movement of the Key and connected mechanism as set forth
and the printing mechanism actuated by an electric magnet
circuit closer in combination with the revolving Type
wheel and Key. 3rd The Rack and mechanism connected
the Type wheel for moving the same endwise of its shaft
each time Key is operated

4 The means for moving the paper along after one line
has been printed upon

5 The toothed wheel N. to connect the electrical circuit
as set forth

6th the cross shaft V and parts carried by the same
in combination with the shaft A Type wheel and Key
as set forth. The general construction and combination
of parts specified for stopping the Type wheel
producing the impression and moving the Type wheel
each impression and the paper each line is set forth
Signed by me this 10th day of October 1871

(Discovered by J. Thomas Edison) (1871)

No 1

To all whom it may concern Be it known that J. Thomas a Edison of Newark Essex County New Jersey have invented certain new and useful Improvements in Puncturing Machines for Telegraph uses and the following is declared to be a correct description of the same so far as perfected

This invention relates to applying electro magnets directly to the levers of the punch or perforators also to the manner of arranging the finger keys and their electrical connecting also to the paper feeding device In the annexed sketches Fig 1 is a plan of the apparatus showing also the electrical connections

Fig 2 is a plan of the apparatus showing also the electrical connections

Fig 3 illustrates the manner in which the finger key connects the battery with any particular magnet and punch

Fig 5 represents the paper feeding device

Fig 4 is a perspective view illustrating the arrangement of the dies punch and magnet The die D is supported upon a suitable bed and said die is made in two parts the paper to be perforated passing between them vertical openings are made in the dies to receive the punches and said punches are guided by the plate E see fig 4 ten of these punches are required to make the various combinations forming but for greater clearness I have shown but five the alphabet and I prefer that the punches be arranged so as to perforate the dots upon one line and the dashes upon another side punches

are at the ends of levers $\overset{1}{C}, \overset{2}{C}, \overset{3}{C}, \overset{4}{C}, \overset{5}{C}$, pivotted at 30° provided with armatures of usual character directly over the electro magnets G, G, and when an electro magnet is changed its armature and lever is drawn down and the paper is perforated by the punch at the end of said lever each lever is drawn back to its normal position by a spring.

The manner of directing the electrical currents as to bring one or more of the punches into operation is as follows:—

T. is a shaft upon which the outer ends of the finger keys are secured and which forms a fulcrum for said keys. Immediately under the range of finger keys is a series of metal bars supported by the insulated standards 25 and each bar is connected electrically to a magnet G upon the underside of each finger key are one or more teeth or projections provided and these teeth are placed so that when a key is depressed they will come in contact with one or more of said bars L, M, N, O.

P. If the character representing the letter A, are to be perforated which requires the punches $\overset{1}{C}, \overset{2}{C}, \overset{3}{C}, \overset{4}{C}$ to be brought down the finger key A, is first depressed. This key has five teeth or projections upon its underside and placed so that they will come in contact with the bars L, M, N, O. upon their coming in contact an electrical circuit is made from the battery by means of the wire & shaft T, finger key and teeth (A), bars L, M, N, O, wires 1, 2, 3, 4, 5, to the magnets G which magnets immediately draws down the punch lever $\overset{1}{C}, \overset{2}{C}, \overset{3}{C}, \overset{4}{C}$, and cause

the perforation of the various dots and dashes the circuit is by the wires 10, and 9.

From the above it will be understood that the magnets are charged and punches brought down the perforate the paper whenever the bars L, M, N, O, P, are in contact with the teeth or projections upon the underside of the finger keys and that the position of these projections is different upon every key to make the various combination of dots and dashes forming the alphabet.

The bars L &c might be provided with teeth instead of the finger keys and placed so that when a key was depressed it would pass over the bars allowing the current to pass through one bar and magnet and complete the punching and then to the next bar and so on performing the operation gradually and not all at once. The paper is fed by the following means W_2 is a shaft working freely in bearing in the supports E, B_1 and rigidly connected to this shaft by sleeves, S, S, and arms R, pass under the range of bars L, M, N, O, P, and are secured at their outer ends to a plate or strip K, L_2 is an arm or lever secured at the shaft W_2 and provided with a slot at its upper end taking a pin upon the paper carrier C^2 . This carrier C^2 is formed as a plate over which the paper passes with an arm C^1 extending from the same connected to shafts T, T, sliding on supports, T_1 T_2 is the paper feeding clutch ³ pressed the carrier. The normal position of the parts is shown in fig³ but when a key is depressed a projection 50.

upon its outer end ^{No 4} depresses the palati K and
throws the arm 45 to the position shown by dotted
lines which causes the clutch N to grasp and feed
the paper upon the return movement the clutch
slides over the paper

It will be understood that the length of the pin (so)
determines the amount of feed and that this pin
must vary in length upon the different keys so as
to feed the paper the paper distance required as there
are but seven different distances to feed with the
horse alphabet

upright X is carried forward to the place where it should stop when the click will leave the R and clutch & carry forward the paper

5

401 Figure 12 Represents another mode of preventing the momentum of the mechanism interfering with the accuracy of feeding the paper and is preferable to that shown in figure 11 as it is more positive in its nature

The Morse, alphabet composed of dots and dashes requires the paper to be fed seven different distances several of the letters being one distance and several of another thus it will be seen that in perforating the paper with different characters that this distance to which the paper is to be moved varies almost at every letter, Now in the forward movement of the paper its momentum and that of the mechanism is easily stopped

and brought to a dead lock by means of a stop screw X shown in several of the devices, but that is not the case when the paper clutch is moved back a given distance for instance if we wish to click the paper $\frac{1}{4}$ of an inch back from the stop screw X the key K is depressed the bar T moved forward and the lever G moves the clutch H back $\frac{1}{4}$ of an inch

Theoretically But practically it is impossible to work connections from one or more levers without some dead motion and when two or three connections

are so made the dead motion is quite considerable Now sometimes this dead motion is taken up by the momentum of the lever G but sometimes

it is not then the click will clutch the paper in one instance $\frac{1}{4}$ of an inch from the stop screw and again $\frac{1}{16}$ from the stop screw

And further in practice could the joints be made

1002

in so perfect a manner as to give no real motion this paper upright is thrown back with such great rapidity that every part of the mechanism would spring and then by going back a greater distance than is desired the parts could be made very heavy and solid but the speed of the instrument would be greatly reduced as the paper feeding mechanism has considerable leverage upon the keys owing to the large distances that the paper must be fed.

Fig 12 shows how these defects can be remedied in a great measure. F is a drum rigid upon the shaft U upon ^{this} same shaft is the bar G but is movable on the paper part of the lever C. The click or clutch H and immediately beneath it there extends out from the lever a square bar X' show more clearly this

X is the stop screw J ^{is} the driving rod, having a pin K upon its end which works in the slot of the upright G, A is the device that I call the back stop in contradistinction to the stop screw X or front stop, it will be seen by the following description of its operation that the lever C plays between two rigid points and thereby a positive motion is obtained the only difference between the forward stop and the back stop is that the latter is movable or adjustable by the movement of the lever C by means of the stops L, M, N, O, P. A is a bar having stops upon one end and is pivoted at B. S is a cam slot secured firmly. The bar A is an upright bar secured firmly at H' upon the bar J, and having a pin, upon its end which enters the slot B and when the paper driving rod J is thrown forward by the depression of the key the

1003

Bar A is thrown down by the pin c acting in the cam slot and is thrown up when the lever comes back.

If we desire to clutch the paper $\frac{1}{4}$ of an inch from the stop screw X the Key is depressed and the Bar T goes forward and the lever G is moved back and at the same time the bar A is lowered by means of the pin c and slot E enough to bring stop into the path of the stud X upon the lever G thus arresting its further progress backwards and when the Key is raised the clutch H grasps the paper and feeds it forward. If it is now desired to clutch the paper $\frac{1}{2}$ inch back the Key having a corresponding pitch in its cam is depressed the bar T is thrown

forward and the lever G comes back and is arrested by the stop O in the bar A. which bar is at the same time lowered an exact depth corresponding to the distance that the upratchet comes back. I do not wish to confine myself to this particular combination as the stop A and mechanism can be combined in the other paper feeding devices already shown nor do I wish to confine these devices to a perforating machine as they may be employed to feed paper in any machine that it may be necessary. Fig 13 represents the ^{lever} ~~paper~~ with the attachments constructed in such a manner that the friction is greatly lessened. It is the lever-wick segment, s, c in part and works the clutch and feeds the paper upon the segment, G. Fig 13 is the arm which prevents the paper from bowing up and is secured rigidly to the slot, W and adjusted so that the segment upon the lever F is running through the arc of circle represented by the dotted line in Fig 13, does not come in contact with it nor does it put any friction upon the paper but is so adjusted that paper will pass easily without friction between

it and the segment, S. M is rigid tied between the end of wick end the clutch N between the end of wick end the clutch N, the paper passes and said clutch held down upon the paper by the spring R. it will thus be seen that all the friction in this device to contend with is that of the click N which must necessarily be and is of little consequence

Fig 14 Represents ^{another} device for feeding paper this difference being only in the manner of transferring motion from the bar J down to I. in this case it is done by the segmented rack, R and straight rack G upon the bar J.

Fig 15 Represents a paper feeding device where the distances are all the same & matter what the length of the letter may be and is done by the moving cam upon the key U is the lever and the driving bar R is the key C is the wavy-slotted cam and, p, the pin upon the bar J, when the key is depressed sufficient movement is given the key to carry forward the whole number of punch-bars and punch the letters and allow them to be thrown back before the pin enters the slotted cam C after it does enter the pin follows the form of the cam and a regular intermittent back and forward motion is given to the bar J, always the same and the full length of the letter punched is fed forward half by the passage of the key downward and half by its passage upward. I do not wish to confine myself to carrying forward the whole number of punches necessary to perforate a letter at a time and in the case of the wavy-cams a similar device can be arranged with the punches and the letter made by different movements (ie) one punch is carried forward and at the same time the paper is moved the length of this punch and then on the bar is carried

1006

forward and punches a second hole and the paper fed the length of the punch and so on. I rather do wish to confine myself to any particular paper feeding device combined with a wavy cam movement as they are when thus combined innumerable among which is that shown in Fig. 16.

A forward rotary motion in this case is given to the paper roller by means of the incline *a*, acting upon the V shaped tooth wheel and actuated by the back & forward movement of the paper driving bar *T*.

Fig. 17 shows another arrangement that can be combined with this motion. *R* is the roller that keeps the paper upon the face of the milled wheel, *M*, *X* is the stop screw to stop the momentum of the wheel, *C* is the dog or click that engages with the fine wheel *M* and carries it forward when the Rod *J*, is moved back. *U* is the lever which carries the chuck, *G* is a stop screw to let the click off the wheel *M* in case the momentum should carry it further back than is desirable.

Fig. 18 Represents another form where paper is driven by a ratchet wheel & pawl and the momentum is stopped by a tooth upon the arm that carries the pawl which is brought into the path of a second ratchet wheel with teeth turned opposite from the driving ratchet. The paper is held up on two roughened wheels on the same shaft as the ratchet, by a vulcanite rubber roller or any equivalent to it. This form of paper feed is very reliable when the motions are all of the same length not so when the motions are variable.

Fig. 19 Represents how an intermittent motion can be given to the driving bar so as to combine those bars which require motions of the same length. *J* is the

lever driving bar jointed at P and connected to the lever in the same manner as heretofore described instead of a shaped wavy cam I use a cam wheel M having one or more teeth ^{to a} ~~than~~ ^{upon} the key spindle sleeve, K secured to it and having a spiral groove cut in it like a worm or screw, a, a' are two rigid pins running in these grooves one upon one side and one upon the other N is a spiral spring wound around the key to move it upward when the hand is taken from it Now when the key is disengaged the rigid pins a, a' turn the spindle around as it decends and the cam wheel turns around with it and gives an intermittent back and forward motion to the driving lever J and lever V. Now when the hand is taken off of the key the ^{spiral} spring N pulls or shoots the key upwards and the key is again rotated back to its original position I do not wish to confine myself to any particular form of cam wheel as it can be made in several forms Fig A shows another of this wheel

Neither do I wish to confine myself to screw as the spiral groove may be cut in the key or a spiral raised line may be run around the key and the groove cut in the rigid piece or arms a, a'.

Fig 20 Represents a paper feeding device where by the work or pressure upon the key is greatly lessened which is a great object when speed is required in this case the paper is fed forward by a weight attached to a shaft which carries a fine toothed wheel

which engages with another wheel having fine teeth between which the paper passes its movement is controlled by an escapement wheel H having 4 or more teeth and joints, &c. upon the driving arm J, I do not wish to confine myself to a weight as any other mechanical devices for slowing up power or any force or motion can be used. Neither

no s

do I wish to confine myself to the particular paper-driving device shown as nearly all of the paper-feeding devices shown in this caveat can be so combined. Neither do I wish to confine myself to any particular Releasing device or escapement as any of the usual release escapements can be combined to this device.

Fig 21 shows another paper-feeding device the main part of which consists in the construction of the clutch or clutch. Instead of using a clutch or clutch having letters upon its end I use a smooth clutch being a straight bar having a notch filed in the width of the drum upon which the paper moves. Fig 21 section B gives a half section view of the clutch. A is the drum B is the clutch C is a spring which presses knife edge in the lower part of the clutch against the inside periphery of the drum and it also presses the other knife against the paper and drum, the paper passing between the slots and the drum this clutch swings upon a pivot at E. Now when a backward movement is given to the upright U the clutch moves back upon the periphery of the drum over the paper but the knife edge being very smooth and having no pressure upon the paper & drum do not carry either with it but when a forward movement is given to the upright U the spring C throws the knife edges against the periphery of the drum.

no 9

and the paper and parchment of the drum outside and it will easily be seen that the paper and drum is clutched and carried forward the power used is drawing the paper the tighter will the clutch hold this clutch can be combined with the paper alone in several ways and the drum dispensed with also a front stop screw may be placed in connection with it to stop momentum of the drum and paper should there be any.

Fig 22 Shows an other paper feeding device the only dissimilarity between it and one or two already described being the of a fork G to hold the paper down upon the drum to prevent it from bowing and drawing back.

Fig 23 shows another paper feeding device its peculiarity consisting in the construction of the clutch this clutch is made in the form of a fork having two arms G, J, upon the ends of which are fine teeth H is an arm extending from the clutch X is the stop screw this click or clutch is pivoted upon the lever V at N and is drawn to the right by the spiral spring A when the lever is drawn back the arm G clutches the paper & C carries it forward with the arm H comes in contact with the stop screw X when the arm f is thrown down upon the wheel and further movement of the wheel or paper is

No 10

effectually prevented this device can be combined with the back stops shown in figs 12, 11, 24, 25, & 28-29

Fig 24 Shows a back stop unlike the one already described inasmuch as there are no stops upon the ^{lever} bar A. It is upright second to the bar A, and has the same leverage as the T saw when the shaft T is thrown forward the two levers T & V are thrown back exactly together and at the same speed but should the lever T, be by its momentum be thrown back further than the required distance bar A will raise the feeding H up an prevent it from clutching of the paper too far back Fig 28 show another form of the variable back stop device the difference between it and that described in fig 12 consists in placing the stops upon the feeding arm H instead of the bar A which in practice is preferable for the reason that when the lever T is arrested by the back stop shown in fig 12 it rebounds and carries the paper forward a perceptible distance and then returns to the stop and in some instances rebounds a second time but in this case the click clutches the upright upon the drum and prevents a rebound and at the same time prevents the momentum from interfering with the accuracy of the feed

No 11

Fig 25 Represents the back stop the difference between it and that described in fig 12 consisting in allowing the chuck H to be thrown up or arrested by one of the stops upon the bar A, instead of arresting the lever this device is probably the most reliable of any shown as any rebound in the lever or momentum does not interfere with the paper and the click clutches the paper always in the right

11

place its operation is so simple that by a reference to the drawing it will be easily understood in this form a paper driving device is obtained which is absolutely positive and one that does not depend upon extreme accuracy in construction for successfully feeding the paper.

12

Fig 29 Represents another form of the back stop on another device which produces the same effect as the stop in this case the bar A, is laid flat and pivoted at A, and is made of flat sheet metal the stops running across the whole length of the drum D. G is the click click on click is the lever B the slotted cam in which the pin C upon the bar from the shaft J plays in and throws the stops back & forward from one end of the drum to the other the operation is quite simple when the bar J is thrown forward the lever C comes back and the bar A moves across the paper upon the drum one notch of the bar A being always in the path of the clutch row when the motion is arrested should there be any momentum or rebound to the lever & the clutch will leave the paper & go upon the bar A consequently it cannot clutch the paper a greater distance back than is intended.

Fig 26 Represents another paper feeding device unlike those already described M is the paper carrier A is an arm upon one side of the carrier (pivot) at one end and having a cam shaped end 21 extending over on the top of the corner M is a spring to hold the end 21 cam down upon the carrier & paper which passes between the end 21 & the carrier K is a clutch for feeding the paper it is pivoted to the lever

No. 12

when the lever is thrown forward the clutch K grasps the paper and passes underneath the cam which is lifted up by a small pin A, upon the clutch K but is drawn down again by the spring a as soon as the clutch K has passed under it. Now when the lever T returns the clutch instead of being drawn over the paper and wearing out the fine teeth as it does after a little it rides back over the top of the cam n, which is provided with grooves that the fine teeth may run in and not touch the arm n.

No. 13

Fig 27 shows another form having a cam to prevent the clutch riding back upon the paper cc as a cam secured to the paper carrier M is a thin forked spring to hold the paper down upon the carrier and prevent it from a bowing. K is a clutch kept down to the paper by the spring a when the clutch goes forward the teeth upon the clutch K grasp & carry forward the paper but after it has reached the end of the cam N the spiral spring G pulls the clutch off the paper over onto the carrier M and is drawn over farther than the spiral spring G would naturally draw it by the pitch of the cam but it springs back again on to the paper in the backward motion and goes up the other side again as first described. Fig 30 shows a device where the momentum of the part may be materially lessened and the cam motion upon the key dispensed with as also slotted or lever connection upon the paper feeding lever T which in this case is done by a close fitting worm & gear the worm being secured to the lever T, and the gear wheel to the lever T.

No 14

D is a wheel or pinion upon the bar or shaft J revolving the rack C upon the $\frac{1}{2}$ spindle K

No 15

Now by depressing the key K the rack C revolves the wheel D + shaft + worm X which in its turn revolves the gear wheel W and moves the lever T to a distance regulated by depression of the key and when the key is allowed to rise the motion is reverse and the lever is carried forward I do not wish to confine myself any ^{stroke} particular clutch or to any click or cluck having teeth upon its end or a roughened surface as they can in most all cases be made to clutch the paper with sufficient tenacity to carry it forward nor do I wish to confine myself to metallic clutches or wheels for in a number of cases of rubber rollers can be used with advantage

Fig 37 Represents the manner in which the Key can be combined with a pinion shaped Key (ie) instead of placing a Button or Knob upon the top of the rods bearing the two cams a second lever can be combined with it the end of which is covered with bone or ivory + which is a more convenient form than the forms already shown having a greater surface for the finger consequently can be operated upon more quickly

Fig 38 Shows the die and the manner of arranging the holes so as to punch the dot and dash characters

Fig 39 is an explanatory table showing the manner of forming the Letters from the thin holes in the die. If No 1 + 2 is punched a dash is made as will be seen by referring to the drawing if No 1 is punched a dot only will be made  if Nos 1 2 + 3 is punched

No 16

a long dash will be made to form the letter A, which is a dot + a dash the let 344 is punched c to form B which is a dash three dots the 1.2 4th C 1st + 8th is used + so on through the alphabet. If it is found necessary to make longer dashes than the space taken up by two dots one or more dots can be added to the combination.

Fig 45 Represents another combination by which the whole alphabet may be perforated upon paper which will not need an explanation.

Fig 41 Represents a strip of perforated paper with the letters A + B upon it + also the styles used in transmitting the paper passes beneath the double pointed pen style, which is in connection with the fine F¹ the arm a first comes in contact with the metal underneath, which is connected to the battery and thus closing the circuit for a time equal to the length of the hole an is recorded at the distant station upon paper by the pen C Fig 42 in one line as the paper passes along the paper space between the first + second dot breaks the circuit and the arm a passes into the second dot + closes the circuit and would break it again at the end of the second dot but just at the moment the arm a is leaving the second dot arm B enters the third and the circuit is prevented from being broken this extra length of time that the circuit is closed allows the pen c to record a longer work upon the receiving paper + a dash is the consequence. Fig 43 shows front view of the pen F¹ instead of a flat front a roller may be placed at the each end of arm A. B and also in the receiving pen c fig 42

No 17

Fig 40 shows how the paper may be embossed with this combination shown in figs 38 & 45 or any combination having two or more rows

Fig 44 shows how the embossed or raised dots ^(C) dashes may be made to close ^(C) open an electric circuit P is the paper D is a spring having a point which presses upon the paper G is the standard which carries the device M is a platinum pointed screw connected to the battery B as is also the spring A now when the paper has no raised dots or dashes upon it it passes beneath the point of the spring A and does not raise or affect it but when a raised dot or dash passes beneath it it is raised up and comes in contact with the screw M and the circuit is closed but returns again when only the thickness of the paper intervenes

no 15

Fig 49 shows how the die may be made Fig 46 & 48 shows how punch may be formed Fig 47 shows still another form of punch

Fig 50 shows a device for allowing the punches to spring back after they have punched a hole in the paper while the key is depressed

Fig 51 show the combination similar to that shown in fig 38 & 45 with the exception of discarding the die and cutting out the paper by a hollow punch upon a smooth surface

Fig 52 & 53 show the device represented in Fig 21

Fig 54 shows a punch & die of peculiar construction C & D are two punch bars fitted to the two holes X.X. in the

but if it is desired to feed the paper say three teeth in any given distance the Key is depressed the dog is drawn back three teeth and when raised it carries the ratchet wheel & the paper driving devices forward untill arrested by the stop screw K, etc.
 Fig 7 Represents in another form without the gear wheels to drive the rubber rollers which in this case are simply driven by friction.
 Fig 8 represents another form in which the rubber roll is dispensed with and the paper is driven directly upon the of a wheel by the dog which in this case has its end roughened the momentum of the drum or wheel or click & paper or paper is stopped by the clutch coming in contact with the stop screw K'.
 Fig 9 Represents another form wherein the stop screw and roller drum or wheel is dispensed with and a flat surface is used the operation of this mode will easily be seen by referring to the dotted lines the fork F' is used to stop the momentum of the paper should there be any.
 Fig 10 Represents another form wherein the click is carried forward upon the rod C by a lever or other device.
 Fig 11 shows another form of a paper feed C is a segment upon which the paper passes and is secured to lever X which is pivoted at P. X' is the stop which locks the paper-driving X' and prevents the lever being moved too far. R is a thin piece of steel which lays upon the segment and wheel if it comes in contact is to a knife edge. This end of this plate steel plate K is fastened to the square shaft H plays within the slots M M.

P P' is paper driving lever having a pin on its end working in the slot of the lever X. V is a lever pivoted at m and connected primarily to the square rod H. This lever is worked back and forth by two pins upon the paper driving lever P. P or it may be pivoted.

The operation of this device is as follows when the paper is to be moved a given distance a Key is depressed and paper driving bar P P is thrown forward and acts upon the lever X to throw it back from the point X and the flat steel bar R, moves at the same time, leverage of the two being the same but the paper does not go back as the click TO upon the stud S. prevents it but when the Key is thrown up, lever X is moved forward ~~with the~~ to the stop screw X. The bar R also moving at the same time & after the pawl has fed the paper the use of the attachment on device R is that in practice it is necessary to perform with any degree of rapidity that the paper device should act with great certainty and rapidity. But unless some device is used that prevents the paper carrier F from carrying beyond the point where it is intended to stop the feeding will be irregular. This device prevents the momentum of the upright for should the upright go farther then the bar R the paper driving click or clutch will jump upon the plate thereby leaving the paper and when the paper carrier has reached the limit of its movement by its momentum has gone further then it was intended the click or clutch will be upon the ~~stop~~ stop bar R and will not clutch & carry the paper forward until the

Mrs A. Edison Esq

Dear Sir

about eighteen years ago a
locomotive was fitted on the New
Haven & Northampton R.R. by
the Bradford Iron Works of Bristol
which was made thus

there was a large funnel in front of
the locomotive and a pipe running
along over the cars with couplings.

In view of this shall the caveat
be prepared for your modification?

Yours truly

Lemuel W. Serrell

1872. Telegraph - American Telegraph Works - General (D-72-004)

Correspondence, agreement.

Not selected: correspondence unrelated to Edison.

Agreement made this twenty eight day of February in the year of our Lord One thousand eight hundred and seventy two, between The American Telegraph Works of Newark, New Jersey, by their superiorintendent A. W. Towne of the first part, and William Lorenz of the same place of the other part, as follows:

The said party of the second part hereby contracts and agrees to make for the party of the first part, the hundred Roller Pens composed of Brass, Steel and Platinum.

The Platinum Rollers are to have steel hubs, running on steel pin centres - The Rollers to be hung in a Brass frame attached to watch spring, by being inserted in a saw-knife and pins, and said watch spring to be attached to a base of sheet Brass with two pins each - said springs are to be of exact equal length and the frame of exact equal length - The spring holding the Rollers to be in the same plane so that the Rollers shall be in exact line with each other. The Brass holder to which the springs are attached, to be cut, finished and bent as per Model furnishes, except that the Shank shall be of uniform width with the brass plate and all the Shanks to be of one and the same uniform thickness, so that they will all fit interchangeably into one saw-knife, at twenty six cents for each double Roller Pen.

The party of the first part hereby agrees to pay for said Rollers when finished and approved and accepted by said A. W. Towne, at the price for each as above specified.

In witness whereof the said parties

have hereunto set their hands and seals the
day and year above written

Witness present

M R. HARRINGTON, - - -

I DID NOT FIND YOU AT THE OFFICE ON BROADWAY THIS MORNING, AND CAME OVER HERE. BUT WHEN I GOT HERE, I FOUND THAT YOU HAD GONE BACK AGAIN. I ALSO FOUND THAT IN ADJUSTING THE MACHINE ONE OF THE RIBBON SPOOLS HAD BECOME SO TIGHT AS NOT TO LET THE REBBON TURN, WHICH PREVENTED ANY INK SHOWING ITSELF. THIS IS THE REASON YOUR SPECIMENS DID NOT PROVE ANY BETTER. BUT NOW IT WORKS ALL RIGHT; AND I THINK YOU WILL BE ABUNDANTLY SATISFIED WITH IT.

D E N S M O R E.

New York 15-Apr-72

My dear Mr. Murray

While I shall regret to disturb you, I am compelled to say that the duties performed by you are of a character not justifying 40¢ per week or 200¢ per annum. For one half or one quarter of that sum I can have a clerk who will be useful in the tool room and in other ways, for I suppose the work you do does not occupy you thirty minutes a day other than Friday & Saturday. We simply can't afford to pay so much.

Very truly
G. W. Hamington

(Frederick G. Johnson, Pat. No. 102,552)

New York, Feb. 25, 1874

Dear Sir,

I have made an examination of the perforating apparatus for which a patent was granted to S. A. Edison on the 5th Decr 1871 in reference to the alleged anticipation of the invention by the Combs filed by S. F. Howe April 14, 1870 and Oct 3 1870.

In their general principle the two inventions are substantially the same consisting of

1. a series of horizontal punches so arranged as to be forced through the paper into dies or sockets each punch being provided with a retracting spring.
2. an equivalent number of horizontal slide bars to actuate said punches when driven against them.
3. a series of finger keys, connected with these slide bars, in such a way that the particular bars required to actuate the necessary punches for each letter are selected by means of projections differently arranged for each key of the key board.
4. a paper feeding mechanism the extent of its movement in each case being determined by the location of projections, varying according to the length of the arbitrary telegraphic character produced and so arranged as to feed the paper after the punches have been withdrawn therefrom.

In the first two prints stated above

there is scarcely any difference even in form. The two inventions are practically the same thing.

As regards the third point, the difference consists simply in the fact that in the propertiers' version for each key, which governs the movement of the slide bars themselves in Edison's Machine, while in Groves they are on the propertiers which act upon the slide bars. Therefore in Edison's Machine only the slide bars which are required to operate the necessary punches in each particular case are moved forward, while in Groves all the bars are moved, but only the required ones are brought into line with the to operate the latter. The principle of selection is the same in both machines.

As regards the fourth point, a very similar difference exists. Edison uses propertiers placed at different distances according to the length of the letters, upon the rods actuated by the keys, while Groves uses a second set of slide bars of corresponding varying lengths. The details of construction are in themselves very different, but the principle involved is substantially identical.

I consider that the 5th, 6th, 8th, 11th, and 12th claims of Edison's patent are anticipated by Groves' caveat.

With regard to the 10th claim there is perhaps some question, although I am inclined to regard Edison's Mechanism as an equivalent of Groves for accomplishing the same end, and substantially the same thing is true of the 18th & 19th claims. The remaining claims of the patent refer to devices which do not in any ~~way~~ way appear in Groves' caveat.

F. L. Pope

original returned.

Friday AM March 8th / 18
Mr. Craig

I received yesterday a little package
that you left for me in Wilsons Store on Monday.
I went to the Shop early Monday and staid all
day & Mr. Wilson was absent the two following
days & so I did not get your letter till Thursday.

I have been experimenting some with the
perforations you sent me, but can't ^{make} get the
recording permanent, how do you succeed with
your samples? In regard to those perforations
of the small perforator, there is no reason why
the holes should not be made closer, they can be
just as well as not, I think I ^{must have} followed some of
Edisons earlier samples when constructing the
machine, His first machines did not make them

Letter

so close did they? I cannot send you a
copy of both patent claims, as the last one ~~how-~~
though allowed has not been issued yet, and ~~the~~
~~the~~ the claims alone without the specification and
drawings, would not be very intelligible, I enclose
the other one. Do you think the Reeling
machine has advanced far enough to warrant
the construction of a model and the preparation
of Drawings and Specifications?

If letters are left on my door knob or pushed
under the door they will be safe and I will
get them sooner than if left in the store as they
sometimes get about there.

Yours respectfully
J Anderson

My Dear M. Charleston Oct 28/72

Your several letters received, & I can assure you they are most heartily appreciated. I should have written you more frequently, but that when my mind is closely bent upon any one thing, I am badly neglectful of the courtesies of life. - I will now try and make amends by a full letter, first regarding your own matters. - I do not at all like the position I find you are getting into, in your association with my friend, Keiff. I really am filled with pity for him in the measure he now has on his shoulders. It is a big thing, - you must acknowledge, & be hoping the ferment of a battle with fate like the present one, - and if he does not act as you think he ought, there is this to remember, that he is freighted doubtless with many considerations that neither you or I - not of. - On the other hand my sympathies and my convictions of justice are with you most cordially. - I know of course how little claim in justice little, has the Model of Instruments in question. And am ready at any & all times to assert my opinion in the matter. I assert, to you, most emphatically, that I think any attempt on his part to patent your model, is a downright steal - & further, that in the support of your claims you should receive the moral & active cooperation of our people. - And thinking this, and knowing of Keiff as I do, I believe with an unswerving belief that he means exactly what he says. - Nothing more. - I shall look for the outcome of this unfortunate controversy - in the success of both sides.

of which I am in a manner
 Interested - With no little Interest.
 Interested on the ~~other~~ side you
 understand only as it may
 affect Reiff - I don't love Little or
 the dis honest trickery -

My Interests are not prospering
 to my satisfaction Either I am in
 daily receipt of communications as
 to how to do this & how to do that
 whilst the facts show that I have
 mastered the situation myself &
 am now sending the right business
 of the P & Co to Washington by
 diplomatic - which New York is
 not able to get a thing from me.
 I send to Philadelphia with much
 better results & receive from him
 & New York very fairly when they
 adhere to my plain & simple way
 of manipulating this thing. Edison
 has been trying a series of experiments
 - of which I heartily approve as
 they may result in something good
 but as yet none of them evince
 a tendency to improve matters
 much. One thing he has tried with a

moderate degree of success. I have
 myself had in use for several
 days and obtain with it the best
 possible results. From a very
 difficult working of the wire, which
 did parallel joined open & all
 delays out I have brought it
 to a practical working regardless
 of parallel wires or delays - And
 am now doing the right business
 between him & Washn. (Bastrow is
 doing well)

I have kept my own counsel
 in the matter & Edison's trial of a
 similar method (though not with
 the same connections, or as successfully)
 does doubtless account to him the
 credit. However let that go.

One thing is sure we are moving
 ahead slowly but surely.
 (I must defer this all business)

3. 11
Oct 20th - I was compelled to drop
my letter & go to work with Washington
and I was not able yesterday to take
it up. Last night we sent to Wash
22 night messages for S & A Co, &
would have sent as many more
but for the fact that Buchanan had
sent Mr. Cobden. He will however
have a full force on hand tonight
so that we can send right along
to him & not be compelled to wait
10 or 15 mins, after sending a batch,
for him to assist in copying, &
thus lose all the advantages of our
system. As far as Washington is
concerned, I have things in a progressing
improving shape, but New York hangs
back, though I think when Edison
gets my msg - quick, pulsating battery
at - we will be able to do something
through him =

Of the workings of Inside
Matters I am utterly without advice,
giving & keep, neglecting me in his
correspondence by turning me over
to Mr. Arrington, which is equivalent
to keeping me in the dark -

I will write again soon, but
you must remember that my time
& mind are pretty well occupied, &
that my correspondence is necessarily
pretty heavy. I write on an
average 5 or 6 letters per day -
beside several sheets of a voluminous
report upon "Autographs Reliquary" which
I am preparing for Mr. Palmer, &
which I will let you see.

Now Comes on the Printer

& Now Barnitz

1872. Telegraph - Automatic Telegraph Company - Agreements (D-72-009)

Agreement.

All selected.

(100,5,1572)

Supplemental Contract.

It is hereby agreed understood by & between Thos A Edison of Newark New Jersey party of the first part & Josiah Key of New York party of the second part, that the contract made by & between said Thos A Edison & Geo Harrington under date of ... was understood & is still held to mean that said Harrington & Edison became joint owners in the interest, inventions & improvements therein mentioned & that said Harrington became the atty acting for the joint interest of himself & the said Edison & that the net results of all such inventions & improvements then made or to be made applicable to or useful in connection with Automatic telegraphy disposed of to any Telegraph Company or other party or parties in the United States or elsewhere were to be and are to be divided one third to said Edison or his assigns and two thirds to said Harrington & his designs -

2nd That in Consideration of the special attention now being given & to be continued in the interest of Automatic telegraphy by said Edison. Effort will be made at reasonable Expenditure to develop the inventions & improvements of said Edison & that Patents shall be duly obtained in the United States & Foreign Countries & that every effort shall be made by said Josiah Creiff in connection with said Edison & Harrington to secure the best market & most advantageous terms for the Common benefit in the proportions heretofore named as the basis of contract already existing between said Edison & Harrington & that from any such net results if any the portion due said Edison shall not be less than Twenty thousand Two Dollars for the United States & a like amount for the foreign patents -

3rd And it is further agreed that
said Reiff will become responsible
for said Edison at rate of two thousand
\$ in Dollars (\$2,000) per annum for
income while his (Edison's) time efforts
are given as proposed in Article
2nd preceding.

4th And further we mutually & individually
agree to labor & readily advise and
cooperate for the common benefit
of said Edison, Harrington & Reiff &
the parties represented by said
Harrington & Reiff.

In witness whereof, we have
hereunto set our hands & seals this
5th day of November, 1892.

John B. Reiff

Victoria Bays Aug 10 1872
 Messrs Edison & Co
 Newark N.J.

Gentlemen

You will please find inclosed
 a Drawing & Specification of Electric engine
 recently patented, please examine it and
 tell me whether or not I can make
 an arrangement with you for its
 development. I have not money enough
 to undertake it and wish to enter into
 a Combination with competent parties.
 If you are pleased with the invention
 you can make me a proposal.

It is intended that the Correspondence
 shall move from P. to P. so that the
 Magnet moves the fulcrum may be
 changed first as to actual time they
 might be required to act.

I have an improvement ready which
 will prove as soon as I find that I

Can make an arrangement to bring the
circulation before the people, the people
with whom I may contract will have
the benefit of that improvement being
made. There is to be time.

I feel that it is waste to say anything
in relation to the supposed superiority of
of this circulation as you will readily think
this. You will take notice that the patent
does not require that all the power should
be upon the same circuit any change in
this particular circuit not invalidate my
claims to the leading principles involved
toward the relation of increase in
the efficiency of the power to the
resistance in the pump.

Hoping to hear from you soon
I remain my dear

Very respectfully yours
H. C. Johnson

p.s. you will understand that this engine implies
the use of an atmosphere engine in combi-
nation when applied to work.

1872. Telegraph - Edison & Unger - Agreements (D-72-013)

Agreement to dissolve the partnership.

All selected.

This Agreement made and dated
his third day

of July one thousand eight hundred and
seventy two Between Thomas A
Edison of the one part and William
Unger of the other part both of the
City of Newark County of Essex and
State of New Jersey

Witnesseth Whereas a
partnership has existed and now exists between
the said parties in the manufacture of
telegraphic apparatus and electrical ma-
chinery, experts in electricity, application
of magnetism to machinery, such
business being carried on in said City
of Newark.

And Whereas the said parties are
now desirous to dissolve such partnership.

Now Therefore his Intention
Witnesseth

First That the said parties agree with
each other that the said partnership between
them existing shall be and from this
date is, ~~thereby~~ annulled and at an
end.

Second The said William Unger
hereby bargains sells and transfers
unto the said Thomas A Edison, all
his right, title and interest in the
said partnership, the tools and machinery

wherein the said manufacture is carried on,
All Contracts and choses in action whatsoever
to the said partnership belonging, excepting
so far as hereinafter stated, Also the
good will of said partnership and of the business
aforesaid, and all property thereof whatsoever.

Third In consideration whereof the
said Thomas A Edison doth hereby agree
to pay and assume all outstanding debts
of the said partnership and to indemnify
and to save and keep harmless and
indemnified the said William Unger of
from and against all debts, claims, damages
and demands whatsoever which may be
brought against the said partnership for
and by reason of anything done in the
carrying on thereof.

Fourth The said Thomas A Edison
further agrees to pay to the said William
Unger as part consideration herefor the
sum of Twenty five hundred dollars in
cash and also to pay the further sum
of Five Thousand dollars, for which he
is to give his promissory notes to the
said Unger in the sum of One

Thousand dollars each, payable at three
four, five, six and seven months here-
from; And further to deliver to said
Unger his own promissory note now held
by said Edison for Three Thousand
Six hundred and forty two dollars and

(2 sub. 1872)

forty nine cents.

Fifth. The said Thomas A. Edison further agrees to pay as part consideration hereof unto the said William Unger, the sum of Ten Thousand Dollars, for which said Edison agrees to give his Bond payable on or before two years from this date with lawful interest; such Bond to be secured by a Mortgage of all the Stock in trade, tools, machinery, choses in action and the property hereby conveyed.

In Witness Whereof the said parties have hereunto interchangeably set their hands and seals the day and year first above written.

Signed sealed and
delivered in the presence of

Witness

1872. Telegraph - Gold and Stock Telegraph Co. (D-72-017)

Correspondence, accounts (1872-1873), bills and receipts.

Filmed in the following order: correspondence, accounts, bills and receipts.

All selected.

[INCOMPLETE]

until they have reached the sum
of £11 = 10-00 per, with no freight
Nor packing they beat you in price,
Of course they promise better workman-
-ship - and one of them did not hesitate
to promise ours, as d - d had -
And I immediately turned my back
on him - he feels that he offended
me, and writes me every few days
But I take no notice of him - I
have told no one about his low offer
and so long as you can give orders
promptly, and they don't get at the
Officers of the Company - all well
I mean on - don't feel bound duplicate
parts, especially springs - & that
was quod over the paper ^{which I never will}
And now must leave you that the
12 bolts were in a very wet condition
and the draw with which they were
packed was also with their offer
Bad luck - and if it was known that
I had imported American Red Bugs
into Great Britain, I could be put
in Newgate - so looks out for you

[INCOMPLETE]

Compromise me -

By the way - Don't deposit that
\$360 with Clews. Go to Duncan
Sherman & Co. & buy ~~me~~ a draft
on N. of England, and send it
home by mail - that is the best
way to do it - I hope before
this letter reaches you, I will
order another lot, say 50 -

Andrew telegraphed me a few
days since, that "50 Treas. must
go Wednesday" Wonder if that
was intended as a reply to my letter
in which I asked him to "please
ship Treasurers" - I came next
morning early - the letter was then
on the way. With the order for 50 -
Be sure and not forget the promise
of "Confidence" write me soon as you
possibly can - yours

David letter re. this { C. C. Calahan
18 Cornhill -
London E.C.

Manufactory
AT SOUTH BOSTON, MASS.
2 Major & Co. 145 & 146 - St. Boston

New York, Oct. 2 1872

Mr. J. A. Edison & D. Murray Co.
New York, N. Y.

Gentlemen. You have assured us many times within the past four or six months, that you would soon pay us the amount due. More especially have you promised us, that during the month of September, you would surely make settlement with us, and yet at this day, "settlement" seems as far off as ever.

Our last statement, handed to Mr. Edison by the under shows the amount due us to be \$305.15 - this includes the accounts of J. A. Edison, D. P. Murray Co., & Edison & Under.

The relations between us have always been friendly and pleasant, and we dislike to do anything to give you annoyance or inconvenience, but we are the servants of the Company we represent, and we are ordered to take measures to collect this account ~~at once~~ we must do so. Gentlemen unless our claim is paid, ~~at once~~ we shall place the matter in the hands of our attorneys with instructions to commence action, immediately. This will be our last communication on the subject.

Yours Very Truly, S. A. Woods Mach. Co., per Boston

New York, Oct. 1 1872.

Below is statement of your account, for which, if correct, please remit _____ at your earliest convenience, and oblige,

Mine, &c.

PRACTICAL TELEGRAPHERS AND ELECTRICIANS,

MANUFACTURERS AND DEALERS IN

Telegraph and Electrical Instruments and Supplies,

No. 38 SOUTH FOURTH STREET.

P. A. E.

Philadelphia, Nov 15. 1873

Will be over on Tuesday to
see you and take at once necessary
action steps according to whatever
conclusions we jointly arrive at. In
today's issue of Prof. Dapoz paper I see
issue of patent to him the claims of which
seem to indicate that he has barely touched
the principles we talked of applying - Since
seeing you I have figured out (it seemed
some very satisfactorily) all the mechanical
simplifications etc which appear to me
necessary to give a splendid system
and if it proves to be the case as now
seems probable, that the combination
hasn't yet been thought of, its good
enough to go at, however & longer -
What I most want to see you about now

is: Working & framing of patent app^{rs}
& if convenient to try and of your
strongest magnets to see how
much strength of an impulse
can get through a mile or so
of resistance. Also examination
of whatever patent data you may have
to see if we are new in this.

Don't forget the Pathway business
my partners are much pleased
with the idea of taking your
agency on a royalty & pushing
strong to our regular customers
the Penn & Reading etc. & advertising
it against the Lockwood.
Will be over Tuesday -

Yours
J. D. Russell

Chas E Buell

Dr Sir

Would be happy to give the
Sun recorder a test in my laboratory at Newark
I have every conceivable variety of Electric
Apparatus, and any quantity of Chemicals
for experimentation,

Yours

Thos A Edison

446 Ward St

Newark N Jersey

CAR DEPARTMENT.

New York, New Haven and Hartford Railroad Co.,

New Haven, Ct.,

Dec 19th 1879

3

Mr T. A. Edison
Newark
N.J.

Dear Sir

Your favor was duly rec^d.
I am engaged as timberman, etc., and
find it difficult to get away for
any length of time.. but shall be
pleased to accept your kind offer
to make experiments at your factory
soon as I can arrange to be away

I must say however that I have
in numerous experiments - succeeded
in recording Electric Signals by
Photographing upon both metallic
and fibrous surfaces prepared for
the purpose - without the aid of solar
rays - the letter, or character, can be
made by shaping sparks, by means
of a revolved disk, or plates, or by
an arrangement of bristles in the
conductors.

CAR DEPARTMENT.

New York, New Haven and Hartford Railroad Co.,

New Haven, Ct., _____ 187 _____

The effect is instantaneous, and any desired shape can be had. I have a very convenient process for preparing the paper, and a device for indicating the proper letter, or character, which is quite simple, and can be worked, either by hand, or automatically. I have not been able to find anything like either the transmitting or recording having been in use. I hope to perfect the part for transmitting, so as to make it convenient to carry, at an early date. Would not object to criticism if you find it convenient to make an appointment at that time.

Have you an electric "doublet"?
Can you get the use of wires to, say
Phila. & return?

Very Truly

CANCELED

THE - ADMIRALTY
1873

[illegible]

Leaking off the surplus current
& giving us greater intensity.
This shunt arranged thus:

Being simply
A Metallic short circuit Operated
to Increase the Consumption of
Material & per consequence the
Amount of Current Fed to the
disc - Still it had not gone
through my darkened mind yet
What this operation really implied.

That night going over to Phil.
On a P. P. C. It struck me
All amidstship, & so demoralized
me that Monday morning found
me with Red Eyes & Headache.
I came back Monday am,
Pushed in to J.C. & told him
I was "Excited" & a "Circle" going
to do something at last of
importance for oblivion. I explained
how the Shunt Operated to
Increase the "Quantity" & reduce
the Intensity. - Now in this

New Departure, I found an
 Explanation of my Failure
 & reaction as rapidly from you
 at Pgh. as you did from me.
 (I had a Betty - Bright from
 a Chemist - composed of very
 large, round, Cyl. Containing Double
 the quantity of ordinary Carbon)
 Now also I accounted for
 no end of funny & previous
 inexplicable actions - (My then
 limited I must "Cut it" =)

He took - so satisfied him
 that Quantity was necessary
 & ⁱⁿ ~~the~~ we could solve
 the problem of 500 a Minute
 from Charles ton = He immediately
 authorized me to buy a large
 quantity Betty & by - h - It
 now stands in Betty room.
 Awaiting trial - two days have
 gone by, but could not
 get wire - Your letter
 comes confirming my hopes
 (but also stealing my thunder)
 Nevertheless - I think the
 old partnership ^{is} which

14
Riff I am sure you & I. will
stand as slight a crucial
test - Here's my hand
Old Boy on the extraordinary
work you have accomplished
during the Britishers -
You certainly have had much
to contend with, & I tell my
friend J.C. No other
man living would have
brok. success from out
of such a labyrinthine
complexity - (Boy) & that I
am glad I did not go
to London - My love to the
Queen - & my regards
to all the rest of the
Boys including Jack
& the Blondel. I
worry my time is
so limited - Ill go you
another by next train

ETJ

New York June 1873
My Dear Edison -
I have been cogitating and
experimenting considerable of
late and have come to the conclusion
that I know a thing or two
about the Whys & the Wherefores
of results obtained =

1st - I started out to discover
why the Shunt at transmitting
station improved the writing, I
having a notion that it was
smoothing more than a mere
leak with a Counter acting
Attachment - I found that
instead of it being in the
form of a leak -
This -

It was - our
fate, no leak at all - but
only a short circuit around
the battery (as we had accidentally
always made it) - Thus -

Edison - now the Effect

of this is - not to lead off the
 Battery - but simply to violently
 excite it into action, & force its
 quantity production. You might
 say that - Putting the Shunt to
 a separate ground, & thus destroying
 the Metallic Connection - was in
 reality short circuiting the Battery
 & would produce the same result
 - but it don't - I have tried it
 - as in first diagram a dozen
 times, but it produces no
 marked good results - While
 the instant you put the ~~ground~~
 Shunt ground & the Battery
 Ground together there is an
 illumination. And wonderful
 results are obtained. I
 deduce from this that the
 violently exciting of the Battery
 by the Metallic Circuit produces
 great quantity - Without giving
it an out let - except by
 the wire - While the ~~separate~~
 Ground - or ground proper.
 excites it and absorbs it at
 same time - so much for

3

That Cal Riff thinks is Impt.
that you should know of this
discontinuation; that I have
discovered existing between
the Ground probe, & the Metallic
Circuit, as you may not have
thought of it yourself. And
Might possibly get on the
Ground Skunt - in some of your
Experiments & "Wonder why you
didn't obtain the proper results"

Now for another feature -
You recollect, when the tests
were made your proposal to
put zinc to live - saying "If
you would just as soon have
it that way I'd prefer it, as
it will save Insulation". I
told you it didn't make a
particle of difference &c -

Now in of a different
Opinion - ("CN" Calling for Red's
Hold up a min" "..." "..." "..."")

Ha! - Just took 20 minutes to
get 16 Red's & Copy them
with only one man, and that

11

on the Franklin wire from
here to Washn - & the K a
from there to Chas to with
All the Parallel wires working
& induction fearful heavy.
& Not a single msg-repeated
- or Correction made - or a
word asked for - nothing but
Ok's & G's & a final OK
G'n - in fact 25 mins from
time first got him -
more working thro. repeater
at Washn - & into working
straight - Button cutting out
Repeater at each Sta - &
Cutting in at End - Relay
Shunted for Indicator at
Washn - Now this 2 -

"It does make a difference
in receiving from the Ground
using Shunt at transmitting
station I figure the operation
to be this -

The current from Battery
sent out of Battery at each
closing - & performs the

5.

The following work -

1st Joins the working current
to receiving station by the
~~ground~~ Earth -

2nd Engenders in the Wire upon
its return (or completion of
Ckt) - the Static - which, passing
into the Earth at transmitting
station Shunt (or leak) flies
thro the Earth again on its
round trip (the Ckt being continuous,
insofar as the static current
is concerned) ~~it~~ passes on to
the paper just behind the
working current - thus
causing a tailing -

3rd Charges the Magnet in
the Shunt violently - causing
it to send a powerful
Countercharge on the Wire

Here are 3 operations
performed by the main
Batt - Now I find that
to use a long Shunt at
transmitting station, You
must "cut" it at receiving

End - to get rid of the
surrounding static - & this
 cutting - so weakens - What
 Current has come through
 that the writing is very
flicking - & soon disappears -
While If you use a short
 Shunt - Cut "Cut" it like
 the Dickens - at transmitting
 station - No Shes - is needed
 at all at Receiving End
 & all the current arriving
 is utilized - the effect
 being to make the writing
 very dark & good - which
 is the effect obtained -
 My theory is - that the static
 flows principally out of the
 wire at transmitting End, as
 at that End - the wire
 being the heaviest chgd -
 the most static is engaged
 - & the operation of the magnet
 in the Shunt is to meet
 & annihilate this "Major"
 static before he enters the

7 Finding R.L. Johns on

Earth - from the wire, & this
operates to prevent any static
from passing on to the paper
except what comes from
the wire back into the
Earth at receiving End, &

that of course comes
underneath the paper =
& is not noticeable = This looks
as if I should then at
all times be able to receive
on Direct Current by a
regulating Shunt at Trans

End. - Which I now do = not
using a Rheo. For either
Wash or Chas. =
My opinion being that by
so doing you obtain these
results

1st Getting Receiving station near
Centre of Circuit =

2nd Annihilation of Static at
point where it practically
originates

3rd The consequent ability
to utilize the whole volume
of current that arrives

Am I sound - or can you
pick me to pieces - I
certainly have good ground
for my deductions, since
I have practical
demonstration of the effect
that my theory implies

Let me hear from
you - I am so infernal
busy that I haven't
time for a word beyond
such as are actually
necessary to express
my ideas - otherwise I
should bedaub your
high flown sentences

About our Britishers

My regards to Jack

Yours
A. P. H. M.

Let me put it briefly this way -

= Use your Box in a place where
it does not operate & carry part
of the current to the ground -
but still operates to destroy the
Static Current = Satisfactory.

A discovery for an amateur
- to be sure we have done it
for a long time. - but none of us
discovered the fact & made
a proper use of it - until now -
I'll be a good pupil of yours yet.
This is it plain

→ M.C. Current
→ Static "

Keep this
 to yourself
 as it is the
 only thing
 which gives
 Max
 5' mind

THE
 Automatic Telegraph Company,

80 Broadway, Room 28.

New York June 20 1873

My Dear Edison -

I enclose a new pen - 13th the diameter of those in use - I find by it I prolong the not time or breakage - And am thus enabled to cut as much as I please & not get a "foul" "Water Key" dot - Which is simply increasing the size of holes.

~~the~~ Minus a insignificant increase of speed & of ruining the paper -

I also find absolute perfection of Dashes - so that I can send slow & "copy by hand" without being able to detect the slightest jar in the Dashes. Or any of that short jerky writing -

I am having this Patent in your name, as also the "Metic" Short Circuit Arrangement - you must go in as Supplement to your patents - Try this Pen & then give me your a.

Dated 2nd Sept. 1878.

Messrs. Smith, Fleming & Co.,

Co-operative

Arrangement

for working patents for improve-
ments in Electric Telegraph and
in all parts of the World except
the United States.-

"A"

This Deed or Agreement is made the second day of September One thousand eight hundred and seventy three between Thomas Alva Edison of Newark in the State of New Jersey in the United States of America of the first part, George Harrington of Washington in the District of Columbia and Josiah Guster Kaiff of the City and State of New York both in the said United States of the second part, John Fleming, Robert McIlwraith and William Nicol of 17 and 18 Leadenhall Street in the City of London sometimes hereafter referred to as "Smith, Fleming & Co.," of the third part and the said John Fleming and I H. Puleston of in the City of London sometimes hereafter referred to as the Trustees of the fourth part.

Whereas it has been agreed between the said parties hereto of the first and second parts and the said Messrs Smith, Fleming & Co., that the latter shall purchase and acquire from the parties of the first and second parts in consideration of the sum of Ten thousand pounds Sterling a one fifth share or interest in all the inventions patent rights and privileges as well British as Foreign and as well existing as future as mentioned or referred to in the Schedule hereto so far as the same relate to or are or can be made applicable to Land Telegraphs as distinguished from Submarine or Subaqueous Telegraphs.

And whereas consequent upon such Agreement it has been arranged between the parties hereto that all such Inventions and patent rights and privileges as mentioned or referred to in the said Schedule hereto shall be from time to time assigned to the Trustees of these presents and shall be held, worked, used and exercised by them for the benefit of the parties hereto of the first second and third parts respectively upon the terms and in the manner hereinafter expressed.

And whereas in part performance of such agreement and arrangements an indenture has already been prepared and will be executed contemporaneously with the execution of these presents whereby the said parties hereto of the first and second parts together with George Edward Gourand will assign to the said Trustees the two British Letters Patent first and secondly mentioned in the said Schedule and will enter into covenants with the said Trustees for the completion of British Letters Patent in respect of the provisionally protected invention thirdly mentioned in the same Schedule and for the assignment of such Letters Patent when completed to the said Trustees.

Now these presents witness that it is hereby mutually covenanted and agreed by and between the said parties hereto (each party covenanting for the acts and observances of each party respectively and where consisting of more than one person covenanting jointly and severally with the other parties respectively) in manner following that is to say:-

1. In consideration of the payment of the sum of Ten thousand Pounds Sterling to the parties hereto of the first and second parts by Messrs. Smith, Fleming & Co., (the receipt whereof is hereby acknowledged) Messrs. Smith, Fleming and Co., shall be treated as having acquired and there is hereby assigned to them by the parties hereto of the first and second parts two undivided tenth shares or interests in all monies, profits, emoluments advantages or benefits arising or accruing now or hereafter from the making, working, sale, disposition, use or exercise of all or any of the Inventions Patent rights and privileges (existing or future and as well British or Foreign) mentioned or referred to in the Schedule hereto so far as the same relate to or are or can or may be applicable to Law Telegraphs, and also so far as may be consistent with the provisions of these presents there is also hereby assigned to Messrs. Smith, Fleming & Co., two undivided tenth shares or interests in all the said Inventions Letters Patent, Patent rights and privileges themselves and for the like consideration Messrs. Smith, Fleming & Co., shall also be entitled to the several commissions or payments hereinafter provided for and also to the option as hereinafter expressed of acquiring a share or interest in the said Inventions, Letters Patent Patent rights and privileges so far as the same relate to or are or can or may be applicable to Submarine or Subaqueous Telegraphs.

2. The parties of the first and second parts engage at their own cost and expense from time to time to apply for and obtain in respect of the said inventions as mention-

ed or referred to in the said Schedule all British and Foreign Letters Patent, Brevets d'Invention or other authorities granting exclusive rights and privileges in all countries and places (except the United States of America) where such exclusive rights and privileges are or may be granted by the Governments of such Countries and places and they engage to assign or cause the same respectively to be from time to time assigned to or vested in the Trustees of these Presents, and they also engage to maintain, uphold and keep the same on foot under all circumstances and for the longest periods which grants of exclusive rights can be obtained from such Governments respectively.

3. The parties hereto of the first and second parts hereby warrant and guarantee the legal validity of all the said British and Foreign Letters Patent, Patent rights and privileges mentioned or referred to in the said Schedule the Agreement for such purchase as aforesaid by Messrs. Smith, Fleming and Co. having been made upon the express condition and understanding that the validity and sufficiency of all such British and Foreign Letters Patent should at all times be guaranteed maintained and upheld by the said parties hereto of the first and second parts under all circumstances.

4. The inventions, Letters Patent rights and privileges mentioned or referred to in the said Schedule and assigned or to be assigned to the Trustees in accordance with the provisions of these presents shall as and when so assigned be held by the Trustees for the benefit of all the parties hereto of the first second and third parts and be dealt

with, sold, disposed of, used, exercised or put in practice by the Trustees in such manner and in such manner only as shall be approved by the parties hereto of the first second and third parts or in the event of a difference of opinion between them as shall be decided by a majority of votes each of the said parties having or being entitled to one vote in respect of each one tenth share or interest possessed by each and in case of an equality of votes then as shall be determined by arbitration in the manner hereinafter mentioned.

5. there shall be only one vote in respect of each one tenth share though the firm or persons interested therein may be composed of several individuals

6. Whenever a firm or two or more persons shall be interested in one or more share or shares then the vote or decision in respect thereof ~~thereof~~ may be given by such individual of the number as may be from time to time appointed to act as the representative of such firm or of two or more persons interested in such share or shares or by the lawfully authorized Attorney or Agent of the parties respectively

7. The decision or votes of the parties may be given on any occasion on which the parties shall meet or by writing under the hands of the parties or of their representative as aforesaid or of their lawful Attorney or Agent as aforesaid.

8. Messrs. Smith, Fleming and Co. shall use their best ^{to be} endeavors to find a purchaser on terms approved by the parties hereto of the first and second parts of such ^{parts,} shares or interests of or in the Inventions, Letters Patent Rights

and privileges mentioned or referred to in the said Schedule as the parties hereto of the first and second parts may from time to time sanction or approve in writing under the hands of some or one of them or of their authorized Attorney or Agent.

9. All moneys and other considerations received by the Trustees in respect of any sales, licenses or other profitable use, exercise or disposition of the patent rights shall be held by them in trust to appropriate and divide the same in the manner hereinafter mentioned that is to say: In the first place to pay and defray all costs charges and expenses incurred by or occasioned to the Trustees in the execution of the trusts hereof or in any wise incidental thereto or arising out of these presents or which with the sanction of the parties hereto of the first second and third parts shall be incurred in obtaining or purchasing Letters Patent or other exclusive rights in respect of any invention similar or analogous to the said inventions or in bringing or defending with the like sanction any litigatory proceedings for the purpose of preventing the infringement of the Patent rights (but not such costs as are mentioned in clause 10 nor any costs which ought to be borne by the parties of the first and second parts) and in the next place to pay the commissions as provided for by clause 12 as and when the same shall from time to time accrue due and subject thereto to divide the remainder as follows, that is to say - as to such parts thereof as represent receipts in respect of any land lines or telegraphs only to

7

divide the same into ten parts and pay two tenths thereof to Smith, Fleming & Co., and eight tenths to the parties of the first and second parts or some or one of them or their Authorized Agent. And as to such parts thereof as represent receipts in respect of submarine or subaqueous lines or telegraphs only to pay the whole thereof to the parties of the first and second parts or some or one of them or their Authorized Agent subject however to the provisions hereinafter contained in clause 13,

10. But if any moneys or other considerations shall be received in respect of both land lines and submarine or subaqueous lines then the parties hereto of the first second and third parts shall if possible determine and agree how much of the said price or consideration shall be considered as paid in respect of land lines and how much in respect of subaqueous lines and if they cannot agree the same shall be determined by arbitration and the respective amounts apportioned to land lines and subaqueous lines shall be disposed of in the manner aforesaid

11. No beneficial interest created by these presents in the Patent rights nor the right to participate in such moneys or considerations as aforesaid (save as herein after provided) shall be sold or disposed of by the parties hereto of the first second or third parts (without the consent of all the others of them) to any third parties unless the person or party desiring to make such sale or disposition shall have previously given notice to all the others of the name of the proposed purchaser or purchasers and shall have offered to all of the others of them to sell and dispose of the share or interest proposed

to be sold on the same or not less favorable terms than those proposed to be paid or given therefor and all of the other parties shall have refused or after the lapse of a reasonable time shall have neglected to accept the offer so made any person or persons so purchasing any such beneficial share or interest shall be bound by the arrangements herein made and shall if required by the other parties personally or by Attorney subscribe or execute these presents or some suitable deed or instrument of accession in testimony of his or their being so bound. Provided always that the parties of the first and second parts or either of them may sell a portion of their share or interest to the said George Edward Gourand if they shall think fit to do so:

12. Commissions.

Smith, Fleming & Co., have purchased and shall be entitled to the following payments or commissions.

As regards Submarine or Subaqueous Telegraphs.

Five per cent on all moneys or considerations received in respect of any sale, license or other disposition of the Patent rights or any of them.

In lieu of the commission in any case or transaction Smith, Fleming and Co., may elect to take an interest as hereafter expressed.

As regards Land Telegraphs.

Five percent on one half of all moneys or considerations received in respect of any license under the Patent rights or any of them.

The like in respect of any sale as regards any

9

separate Country or Countries

The like in respect of sale or disposition of any share or interest in the Patent rights as a whole.

If any such sale or disposition as last named be made at such a rate as would if all the shares were sold yield a price exceeding fifty thousand pounds then a further commission of Five percent on the price obtained calculated upon the principle of reckoning such commissions (were all the shares sold) upon one half of the difference between the assumed value of Fifty thousand pounds and the value of all the shares as based upon the price or consideration actually obtained.

In like manner if any sale for any separate Country or Countries be at such a rate that were the whole interest in the Patents sold a sum exceeding Fifty thousand pounds would be realized then a further Commission of Two and a half percent on the price obtained. Such two and a half percent to be on account of the extra Commission payable whenever Fifty thousand pounds has been actually realized but in no case to be returnable.

Whenever Fifty thousand pounds has been actually realized from any source then the commission will be five percent on the whole price obtained instead of on one half the above Commissions shall not be so calculated as to render any part of the price or consideration in any case subject to double commission.

Any difference of opinion as to whether the right to payment of the commissions has accrued shall be a subject for arbitration within the meaning of the clause hereinafter contained.

It is agreed that any sale of any share or interest under the proviso contained in Clause 11 to the said George Edward Gourand shall not be subject to any commission.

13. In lieu of the Commission payable in respect of submarine or subaqueous Telegraphs Smith, Fleming & Co. shall have the option of acquiring the right to a one tenth share or interest in the Patent rights so far as they relate to Submarine or Subaqueous Telegraphs and to the moneys or considerations received in respect of any sales, licenses or other dispositions so far as afore said at a sum equal to one half of the price given for a tenth share by any other person or persons.

Also in lieu of the Commission which may be payable on sales or licenses (so far as regards Submarines or Subaqueous Telegraphs) in any particular case as for instance for any one country or for any particular line of Submarine Telegraphs Smith, Fleming & Co., shall have a similar option of acquiring a one tenth share or interest in any individual Patent rights for any country or in the moneys or in the benefits resulting from any individual transaction and if such rights or interests shall be so acquired the Trustees shall pay to Smith, Fleming and Co., their proportion of moneys or benefits in respect thereof.

All necessary notices with full particulars shall from time to time be given to Smith, Fleming and Co., so as to put them in possession of all facts necessary for guiding them in exercising or declining such option and a sufficient length of time (in no case less than one month) shall always be afforded to them within which they may exercise

such option.

14. In case any of the Patent rights and privileges mentioned in the Schedule hereto shall not immediately as and when granted or obtained be assigned to the Trustees then in the meantime and until such assignment shall be made the person or persons in whom the legal right or interest in such Patent rights and privileges shall be vested shall hold the same subject in all respects to the trusts and provisions of these presents.

15. Without prejudice to the generality of any of the provisions herein contained the said parties hereto of the first and second parts do and each of them both hereby appoint the said John Fleming and I H Puleston and the survivor of ^{them} the true and lawful Attorneys and Attorney of them the said parties hereto of the first and second parts and each of them for the purpose of Soliciting, applying for and obtaining all or any Letters Patent Brevets d'Invention or other like instruments or authorities granting exclusive rights and privileges for or in respect of any inventions or any improvements thereon as mentioned in the Schedule hereto. Also for the purpose of assigning unto or vesting in the Trustees or Trustee for the time being of these presents all or any of such Letters Patent Brevets d'Invention or other like authorities as aforesaid with full power to use the names or name of said parties hereto of the first and second parts or any or either of them in any such application as aforesaid or in any other step or proceeding incidental thereto and to present, sign, seal, deliver or otherwise perfect all or any petitions, applications, specifications, assign-

ments assurances or other instruments whatsoever which shall or may be in any way necessary or expedient for the purposes aforesaid. And with liberty to delegate all or any of the powers aforesaid to any other person or persons as may be convenient and any such delegation at pleasure to revoke.

As regards any such improvement or new invention as is mentioned in the Schedule hereto the parties of the first and second parts will always at once and without delay make known the full particulars thereof to the Trustees or Trustee for the time being and also to Smith, Fleming and Company.

18 If at any time any proceeding shall be commenced or taken to repeal any of the Letters Patent mentioned in the said Schedule or any other Letters Patent, Brevets d'Invention or other like privileges to be granted in any other Country (except the United States) in respect thereof or of either of them or if any proceedings shall be commenced against the Trustees or any person or persons to be hereafter licensed be authorized to use the inventions or either of them in any Country (except as aforesaid) in which it shall be alleged that the several inventions or improvements mentioned in the Schedule or any one or more of them are infringements of rights previously granted to other persons all necessary and proper legal or equitable proceedings shall be taken by the Trustees for the purpose of protecting the Letters Patent or other privileges granted or to be granted (except as aforesaid) and all costs charges

and expenses of and incidental to the prosecution or defence of any such proceedings shall be borne and defrayed by the parties hereto of the first and second parts or some or one of them. And the Trustees may apply all moneys and other considerations for the time being in their hands which under the provisions of this indenture would be payable to the parties hereto of the first and second parts or some or one of them in and towards the defraying of any such costs, charges and expenses and if the same shall be insufficient the deficiency shall from time to time on the request of the Trustees be made good by the parties hereto of the first and second parts or one of them and the Trustees shall not be required personally to advance any sum of money for the purposes of such proceedings but shall always be kept in funds by the parties hereto of the first and second parts or some or one of them but no deduction on account of for the purpose or the proceedings mentioned in this clause shall be made from the share which under and in accordance with the terms of these presents shall or may become payable to Messieurs Smith, Fleming & Co. The parties of the first and second parts or some or one of them shall indemnify and hold harmless Smith, Fleming & Co., and the Trustees against the claims and demands of all persons possessing Patent or other exclusive rights in priority to any of the patent rights agreed to be assigned or shall procure free Licenses under such prior patent rights to be granted to the said Trustees and in particular shall if necessary procure a free license or licenses granted to the said Trustees in respect of any prior patent rights of or belonging to Mr. George Little.

14/
17.

If at any time any person or persons shall infringe any rights already granted or secured or to be granted or secured in any Country (except as aforesaid) which for the time being shall be subject to the trusts of these presents all necessary and proper legal or equitable proceedings shall be taken by the Trustees for the purpose of preventing any such infringement. And the Trustees and apply all moneys and other considerations for the time being in their hands in and towards the defraying of all costs, charges and expenses of and incidental to the prosecution or defence of any such proceeding and if the sum so for the time being in their hands shall be insufficient then the deficiency shall from time to time at the request of the Trustees be made good by the parties hereto of the first second and third parts as nearly as possible in the proportion in which they shall for the time being be entitled to have paid to them the moneys received by the Trustees in respect of Sales of interests in the Patent rights and of Licenses or permissions to use the inventions such proportions to be settled by arbitration in the event of difference and the Trustees shall not be required personally to advance any sum of money for the purpose of bringing or defending any such proceedings but shall be always kept in funds by the parties hereto of the first second and third parts in the proportion aforesaid.

18. It is understood and agreed that no Patent rights of the parties of the first and second parts for the United States of America are included in the arrangements made by these presents provided always that if any such Patent rights in the United States should control or interfere with

the use or application of the inventions and Patent rights which are intended to be subject to the trusts of these presents so as to prevent or render void any arrangement or contract in reference to Submarine Telegraphs which shall touch the shores of the United States then all necessary licenses and authorities under such United States Patents shall be from time to time granted to the said Trustees or Trustee so as to enable them or him to make or conclude any such arrangement or contract. And the said parties hereto of the first and second parts agree that they will only sell or part with their said United States Patents subject to the provision intended to be hereby made for the protection of the said Trustees or Trustee and Smith, Fleming & Co.,

19. Any person or persons may at any time hereafter be appointed as Trustee or Trustees by the parties hereto of the first second or third parts either immediately or remotely in succession to or by way of substitution for the said John Fleming and I H Puleston or any subsequent Trustee and any new Trustee so appointed shall in testimony of his acceptance of the appointment sign and subscribe his name to these presents subscribing himself as Trustee and mentioning the date of his Signature or else signing and subscribing his name to an appropriate memorandum declaring his acceptance of the trust and the date of such acceptance and shall thereupon be treated and considered as having acceded to and become party to these presents of the fourth part. And upon any such appointment the number of Trustees may be augmented or reduced and all proper assignments and assurances shall be from time to time made for vesting the

Patent rights in the Trustees or Trustee for the time being.

20. The Trustee or Trustees shall always be effectually protected and indemnified from and reimbursed any cost, charges, damages losses and expenses which shall from time to time be incurred or occasioned to him or them in or by reason or in consequence of his or their becoming Trustee or Trustees or exercising or performing his or their duties or power as Trustee or Trustees under or for the purposes of these presents and all such costs, charges, damages, losses, or expenses, shall (save such as are or ought to be borne by the parties of the first and second parts alone) as between the parties of the first second and third parts be borne and defrayed by them as nearly as possible in the same proportion as the cost, charges and expenses mentioned in clause 17.

21. Each of the parties hereto will at the request of the Trustee or Trustees or any other party hereto make, do, execute and concur in all acts deeds and assurances necessary in accordance with the Laws of England or any other Country for vesting in the Trustee or Trustees all the said Letters Patent rights and privileges which in accordance with the terms of these presents should now or hereafter be vested in them or him or which may be in any way necessary or expedient for giving full or more complete and satisfactory effect to each and every of the provisions hereby made or expressed or intended so to be and the costs charges and expenses properly incurred in reference thereto shall be treated as an outgoing and paid as provided by clause 9.

22. All stamped duties annuities or other payments which shall at any time hereafter be necessary for keeping on foot all or any of the Patent rights and privileges (existing or future) mentioned in the schedule hereto shall be paid by the parties of the first and second parts.

23. All questions hereinbefore declared to be matters for arbitration and all or any other questions, doubts, differences or disputes which shall arise between any of the parties hereto or their representatives on the construction hereof or any clause or thing herein contained or any other matter or thing in any way relating to arising out of or connected with the said Patent rights and privileges or the rights and interests duties and obligations of the several parties hereto by virtue of the provisions hereby made shall be determinable and ^{be} determined by arbitration in the manner following, that is to say:- Each party in difference whether consisting of one person or several persons (several persons taking one side of a question being considered for this purpose as a single party) shall by some writing under his or their hand or hands appoint an arbitrator. And if either party shall make default in the appointment of an arbitrator for one month next after he or they shall have been required in writing by the other party to make such appointment - a
ment the arbitrator to be appointed by such last mentioned party shall be the sole arbitrator. And the said arbitrators (if two shall be appointed) shall by some writing under their hands appoint an umpire and if within ten days next after their appointment or the appointment of the last of them (if they shall be appointed at different times)

76

they shall not appoint an umpire, an umpire shall be appointed under the provisions of the Common Law Procedure Act 1854 and the award or awards made in writing by the sole arbitrator or by the arbitrators or by the umpire either alone or jointly with the other arbitrators or either of them as the case may require (such award or awards being consistent with these presents and in no case repealing or offering the same) shall be conclusive upon the parties in difference although they or either of them may have died before the making thereof or although the same may not be final or conclusive as to the whole subject of the dispute or difference and shall be in all respects abided by, observed and performed by them respectively on their respective parts and the submission hereby made shall be made a Rule of Her Majesty's Court of Queens Bench or any other court of competent jurisdiction and the arbitrators and their umpire thereunder shall have and exercise all the powers and authorities given to arbitrators by the said Common Law Procedure Act 1854 and the submission hereby made and the proceedings hereunder or consequent thereon shall be governed and controlled by all the provisions of the said Act which are applicable to submissions to arbitration and proceedings thereunder and consequent thereon.

In witness whereof the parties to these presents have hereunto set their hands and seals the day and year first above written.

19

The Schedule above referred to:-

Letters Patent under the great seal of the United Kingdom of Great Britain and Ireland bearing date the 10th day of June 1872 No. 1751 granted to Henry Edward Newton in respect of an invention of "Improvements in Mechanism for perforation paper for transmitting telegraphic messages" Like letters Patent bearing date the 27th day of February 1873 No. 735 granted to the said Thomas Alva Edison in respect of an invention of "Improvements in circuits and Instruments for Chemical Telegraphs".

Provisional Protection under the provisions of the "Patent Law Amendment Act 1852" dated 25th of April 1873 granted to the said Thomas Alva Edison in respect of an invention of "Improvements in Electric Telegraphs".

British Letters Patent for this Invention are now in course of completion.

All existing and future improvements upon the said three Inventions or either of them or comprising any art, process device or mechanical or other contrivance relating to the automatic, or rapid transmission of message by Chemical or Electric Telegraphs which has been already or may be hereafter invented or discovered by the parties hereto of the first and second parts or any or either of them.

All existing and future Foreign Letters Patent Brevets d' Invention or other authorities granting exclusive rights and privileges for the said inventions or any or either of them and also for all or any such improvements existing and future as aforesaid for France, Belgium Holland Spain Portugal Russia Austria Germany Brazil India Canada

and other Colonies or Dependencies of the United Kingdom and for all other Countries States or Dominions (except always the United States of America) where Patent rights can or may be obtained and where it shall be deemed expedient or beneficial for the parties hereto to secure or obtain Patent or other exclusive rights.

All the above mentioned Inventions or Improvements (existing and future) and the above mentioned letters patent Brevets d' Invention or other exclusive rights (existing and future) are comprised in the arrangements made by these presents and are to be assigned to the Trustees or Trustee .

The Invention or Improvement already made by the said Thomas Alva Edison or now in course of being perfected by him and termed by him "The Automatic Type Telegraph System" is expressly included in the arrangements made by these presents but Messrs. Smith, Fleming & Co., shall be under the obligation of paying for their share or interest therein (similar or analogous in all respects to their share or interest in the other Patent rights) a further sum in addition to the sum of Ten Thousand Pounds mentioned in the body of these presents in proportion to the amount which the parties of the second part shall themselves pay to the said Thomas Alva Edison for their shares or interest and such proportionate payment to be made by Smith, Fleming & Co., will not it is understood exceed the sum of Six Hundred Pounds.

I Edward Mortimer Archibald Esq., companion of the Most Honorable Order of the Bath Her Britannic Majesty's Consul General for the States of New York New Jersey Connecticut Rhode Island and Delaware.

Do hereby certify that Edward D. Cowman whose name signature and seal are respectively subscribed and affixed to the certificate hereunto annexed was on the day of the date thereof a Notary public in and for the State of New York duly commissioned and sworn to whose official acts faith and credit are due.

In witness whereof I do hereunto set my hand and seal of office at the City of New York this 6th day of

September in the year of our Lord One thousand eight hundred and seventy three.

By the Consul General
seal of J. Pierrepont Edwards,
British Columbia. Vice Consul.

I Josiah Custer Keiff of the City County and State of New York now temporarily residing in England make oath and say as follows.

1. That I am one of the parties to the deed of Co-operative arrangement dated the 2nd day of September One thousand eight hundred and seventy three made between Thomas Alva Edison, George Harrington and Josiah Custer Keiff, and Smith, Fleming and Company and duly signed by the said Thomas Alva Edison, George Harrington and Josiah Custer Keiff.

2. That I am also one of the parties to the deed of Assignment dated the said second of September One thousand eight hundred and seventy three being an assignment of certain Letters Patent from Thomas Alva Edison, George Harrington, Josiah Custer Keiff and George Edward Gourand to John Fleming and I. H Puleston and which assignment was duly executed by the said Thomas Edison George Harrington Josiah Custer Keiff and George Edward Gourand.

3. I have carefully compared the documents annexed hereto marked respectively "A" and "B" with the original deeds above referred to respectively and now in the possession of Messieurs Wilson Bristows and of London Solicitors and I say that they are true and exact copies of the said original deeds respectively.

Josiah C. Keiff.

"B"

THIS INDENTURE made the second day of September one thousand eight hundred and seventy three, BETWEEN THOMAS ALVA EDISON of Newark in the State of New Jersey, in the United States of America of the first part, GEORGE HARRINGTON of Washington in the District of Columbia and JOSIAH CUSTER KEIFF of the City and State of New York both in the said United States of the second part, GEORGE EDWARD GOURAND of 74 Madison Avenue New York but temporarily residing in London of the third part and JOHN FLEMING of Loudenhall Street in the City of London Merchant and I H Puleston of Merchant of the fourth part .

WHEREAS the parties hereto of the first and second parts are jointly interested in the Letters Patent firstly mentioned in the Schedule hereunder written which said Letters Patent by virtue of an assignment bearing date the 23rd day of July one thousand eight hundred and seventy three and registered in the great seal patent office on the said 23rd day of July one thousand eight hundred and seventy three are now vested in the said George Edward Gourand.

AND WHEREAS the said Thomas Alva Edison is Grantee named in the Letters Patent secondly mentioned in the Schedule hereto and is the owner thereof subject to certain equitable interests thereunder which he has created in favor of the parties hereto of the second part AND WHEREAS the said Thomas Alva Edison on or about the twenty fifth day of April one thousand eight hundred and seventy three applied for British Letters Patent in respect of the invention thirdly mentioned in the said Schedule and Provisional Pro-

85

tection in respect of such invention was on the same day duly granted to him.

AND WHEREAS it has been arranged that all the said Letters Patent and patent rights shall be assigned to the said parties of the fourth part in the manner herein-after expressed and that ^{such} covenants as are hereinafter contained shall also be entered into.

NOW THIS INDENTURE WITNESSETH that in pursuance of the said arrangements. They the said several parties hereto of the first second and third parts according to their several estates or interests, Do hereby assign and confirm unto the said John Fleming and I H Puleston their executors administrators and assigns the Letters Patent first and secondly ^{mentioned} in the said Schedule hereto and all the rights and privileges thereby respectively granted and the full and whole benefit thereof. And also all rights and interests under or by virtue of the Provisional Protection thirdly mentioned or referred to in the said Schedule hereto and all privileges claims or demands thereby granted or secured or in any way incidental thereto and also the several inventions which are the subjects respectively of the said several patents and Provisional Protection respectively and all the right like interest, property claim and demand whatsoever as well legal as equitable of the said parties hereto of the first second and third parts, in to from or in respect of the said Letters Patent privileges and premises hereby assigned or intended so to be. TO HOLD the said Letters Patent privileges and premises unto the said John Fleming and

12

I H Puleston their executors administrators and assigns for the residue of the respective terms of the said several Letters Patent, privileges and premises and for any other term or terms which can or may be obtained in respect thereof and in as full ample and beneficial a manner to all intents and purposes whatsoever as the same could have been held used, exercised or enjoyed by the said Thomas Alva Edison, George Harrington, Josiah Custer Keiff and George Edward Gourand respectively or ^{some or} _A one of them if these presents had not been made and executed upon trust nevertheless to carry out, execute and give effect to the arrangements made or expressed in the Deed or Agreement also mentioned in the said Schedule or such other arrangements as on the basis thereof or consistently therewith shall from time to time hereafter be made between the persons, parties thereto or any other persons who from time to time shall in accordance with such arrangements become parties to and be bound by or entitled to the benefit of such arrangements. AND it is hereby declared and agreed that not withstanding the trusts hereinbefore declared of and concerning the assigned premises the said John Fleming and I H Puleston, their executors, administrators or assigns and any persons or person who either originally or by succession or substitution to or for them or him whether immediately or remotely shall for the time being become Trustees or Trustee either by appointment or operation of law under or for the purposes of the said Deed or Agreement (all and each of whom are included in the expression "The said Trustees and Trustee" and the said "Trustees or Trustee" hereinafter

used) may sell or dispose of the said Patent rights, inventions and privileges or grant any licenses to any other person or persons, to use and apply the inventions which are the subject of the said Letters Patent, in any manner and for such consideration and generally upon and subject to such terms and conditions and in such manner and form as they the said Trustees or Trustee shall think fit and that any sale or license so made or granted or agreed to be made or granted, shall be binding and conclusive in favor of the Purchaser or Licensee, according to the tenor thereof against all parties cestuis que trusts of the said Trustees or Trustee, without the purchaser or licensees being bound to enquire into or being in any wise affected by any knowledge or information they may have received or could acquire of the nature or effect, objects or purposes of the said Deed or Agreement or being in any wise bound to concern themselves or himself therewith, and notwithstanding that the sale or license made or granted or agreed to be made or granted may not be authorized by or be in accordance with or may be in violation of the said deed or agreements. PROVIDED that no sale or license which shall confer or purport to confer any right to use or employ the said inventions within the United States of America shall be valid or be within the terms of the powers herein before given. AND IT IS further declared and agreed that the receipts or receipt of and signed by the said Trustees or Trustee for any purchase moneys or for any moneys which shall become payable by way of License rent or royalty under or in respect of or by way of consideration for any sale or lic-

ense so to be made or granted or agreed to be made or
 granted shall be complete and effectual discharge for the
 moneys which in such receipts or receipt shall be acknowl-
 edged to be received and exonerate the person or persons
 paying the same moneys from all liability or obligation
 to see to the application or in respect of any non appli-
 cation or misapplication thereof. AND the said Thomas
 Alva Edison, George Harrington and Josiah Gustar Keiff
 Do hereby for themselves their heirs executors and admin-
 istrators jointly and each of them doth for his heirs exec-
 utors and administrators severally covenant with the said
 John Fleming and I H Puleston their executors
 administrators and assigns in manner following that is to
 say THAT the inventions mentioned in the said Schedule
 hereto are new inventions within the true meaning and intent
 of the laws of England and that the Grantees are the true
 and first inventors thereof respectively within the true
 meaning and intent of the same laws and that the said Letters
 Patent first and secondly mentioned in the said Schedule
 are in every respect good valid and effectual according to
 the same laws and are in no wise invalidated, avoided or
 voidable and that the said parties hereto of the first, second
 and third parts or some or one of them have or hath become
 the owners or owner, proprietors or proprietor of the same
 Letters Patent and now have or hath good right and full
 power to assign the said several Letters Patent, inventions
 and premises expressed to be hereby assigned in manner a-
 foresaid free from all incumbrances and that the said
 several inventions Letters Patent privileges and premines

respectively, shall henceforth be held, used, exercised and enjoyed during the term or terms subsisting therein by the said John Fleming and I H Puleston and their executors administrators and assigns without any lawful interruption, disturbance, prior right claim or demand by any person or persons whomsoever. And further that they or some or one of them will at their or his own cost execute and do all such further acts, deeds, applications, assurances, matters and things as shall be necessary or expedient for obtaining the grant of Letters Patent of her said Majesty in respect of the invention thirdly mentioned in the said Schedule and for assigning the same when obtained to the said John Fleming and I H Puleston and so far as not already done for preparing and filing full and proper specifications of all the inventions firstly secondly and thirdly referred to in the same Schedule and also for more effectually assigning, assuring, confirming or securing the said inventions Letters Patent and premises expressed to be hereby assigned. IN WITNESS whereof the said parties to these presents have hereunto set their hands and seals the day and year first above written.

The Schedule above referred to

1. LETTERS PATENT under the Great Seal of the United Kingdom of Great Britain and Ireland bearing date the 10th day of June 1872 NO. 1751 granted to Henry Edward Newton in respect of an Invention of "Improvements in Mechanism for perforating paper for transmitting telegraphic messages".

2. Like Letters Patent bearing date the 27th day of February 1873 No. 735 granted to the said Thomas Alva Edison in respect of an invention of "Improvements in Circuits and Instruments for Chemical Telegraphs".

3. Provisional Protection under the provisions of the "Patent Act 1852" dated 25th April 1873 granted to the said Thomas Alva Edison in respect of an invention of "Improvements in Electric Telegraphs".

The Deed of Agreement hereinbefore referred to is a deed bearing date the 2nd day of September 1873 for cooperative arrangements for working Patents for improvements in Electric Telegraphs &c. in all parts of the world except the United States and is expressed to be made between the said Thomas Alva Edison of the first part the said George Harrington and Josiah Custer Keiff of the second part John Fleming, Robert Hellwraith and William Nicol of the third part and the said John Fleming and I H Pules-ton of the fourth part

General (Marshal Lefferts) April 21, 1873
Pres. Gold & Steele & Co

Mr Bergman was contracted with to build a Universal Model, for 125. This model will be finished and delivered to you probably by wednesday PM. I put the price low and out by piece work so as to prevent shirking work. Bergman has altered this model several times at my suggestion some of the alterations were very sweeping, and were made on account of a doubt.

If he only receives 125. he will have lost money and as he has worked conscientiously and hard I think that 200 is but fair and at that it is a very cheap model which on the old plan of day work would cost double.

2

I think you will find that this machine is about perfect. It is very convenient. The results are quick with the machinery working slow. I can do no better I consider it the private line machine and my experience covers over 63 different printing lithographs of my own and a constant work of 5 years 17 hours a day = in a diversity of mechanisms as complicated as 40 bushels of spiders webs.

I believe it would be to the interest of the Co to give the order to me to build more than 100. But I do not know if it would be to my interest. Yrs Resp. A Edison

APPROVED.

J.uman Unger

C. 11. June 1873.

Newark Thursday June 13th 1873

J. H. Edison

Sir I received your welcome letter after I wrote to you I stated all in that letter but since I received yours I wish to put you on some point the Genl. Stoe has now he wants advice in regards to Manchester and you are his best adviser only the point is whether he would like to see you very much but stick where you are if it is profitable to you don't feel uneasy on account of shop I shall keep it square till you return my pay will be less than \$500 per week and we are doing very well I made 16 Regent's Box Benches (25) set the first into 15 set of Keys Sounder Hinges are altering Universal to 15, but star wheel making parts lighter making them like Model of Bergmann except Break which is better and different to Model also altering stock printer to 15 but star wheel they work well in circuit now I am getting along nicely don't fret about shop or your family all is well here I only want times to fry up all outside bills and postps which I am doing slowly but sure,, Edison sell to Fleming or Scarp Hays for that (\$50,000) if possible don't wait one hour let it rip Automatic is dead here only when you are present to give it life business is very dull money is worse than ever I got \$500 note from Reiff in exchange for my note of same amount I expect Miller will let it discounted for me soon so I can

me it & you of old bills believe me I have had
hard times of it since you left I lost 11 lbs in
one month but I shall die in the Harrods if
I ever do die I often get out of small holes —
Hager travels hard on me and the money —
got a coat and mean to come out better than
Beiff feels good over your success so does
Harrington they blow down for automatic
I put Johnson he told me you wrote to him
he felt good but is not our steady friend
I know now how he thinks of I shall tell
him we must I keep him in check some
be condemned all our takes and but —
I am doing some little for automatic
and they owe us I am nearly square with
Gold stock but you give them I Bergman
Contract to alter universal printers in
opposition to us they told you all new
improvements being there and they would
get patent out for said if he did not
give them the printer to alter so you can
imagine what trouble they were to me
and his affair I hope you will tell them
when you come home if I don't before —
I have been nearly wild with all pressure
brought down on me I now see clear out
of the woods. Coulton has done nothing since
you left about Toy but W. V. has not done
anything since you left —
I will meet all notes without selling machinery
but I shall be left poorer as it takes all profits
to meet said demands

I have said all about business here I want you
to stick where you are look after stock printers
as Carl Hays is president of London stock exchange
found him, Callahan arrived here few days ago
organ of being how bad Edison printers were
they were failures W. Andrews told me there
was now in circuit 100, but in London —
send out from Hays all prospect for future
orders as we are now improving them on fast
speed and can make superior but than what
is now in use so see all you can don't
work all day & night and not see anything
so outside see every place where you can
get my ideas from

I want you to fly Appleburgh in private
he is your better friend but he is very friendly
to me Scott is working all possible way against
us every day I have some part of but Stokes
home out I order they are all left on him
deals with Complaint and he is out of sorts
about Manhattan he told me if ever one of
the altered printers give out he would not let
us have anymore work I shall fix it all right
with him on those points Wagner can tell
you how these fellows try to beat us by finding
fault with just without any cause —

our stock printers altered beats all others so
does universal they work fine our tests is
now models for future use on both short &
universal but I shall make them pay for it

we shall get finished in all our endeavours
everything goes nicely Batchelor does very well
he is very cautious about his work —
I have all confidence in his honest efforts
it do well but perfectly easy in regards to
us in fact my only fear is with Private
line department and Scott on stock printer
I wanted to alter Transmitter for stock
Circuit but Scott said Edison Automatic
Transmitter would not do so Perry altered
Hand Transmitter to go with our Printer
and he cant find fault with them now
I cut new tape wheels for each Print
Remove all the old printer make as good
as new furnish all part for (25) Each
we can do well at this price —

now Farewell

Yours if you care

your J. S. Murray

if you want small sum say so I shall
send it to you
wife & baby is well but as she can be they dont suffer
she has had (300) and didnt pay one bill out
of it I dont blame her or find fault with her.
I payed interest in Savings Bank till Nov 175 also
52 to Ross Croft & also Meyer note some other

1873

United States of America,
State of New Jersey, ss.

ON the 12th day of July
in the year of our Lord one thousand eight hundred and seventy-three, at the request of

THE NEWARK CITY NATIONAL BANK.

I, CEPHAS M. WOODRUFF, Notary Public, duly appointed, commissioned, and sworn, residing
in the City of Newark, and State of New Jersey, did present the original note
made by Thomas A. Edison

at 9 mo for \$ 500.00

dated Oct 9 - 1872 and hereunto annexed, at the

Republic Trust Company

to Mr. Nelson Clerk thereof

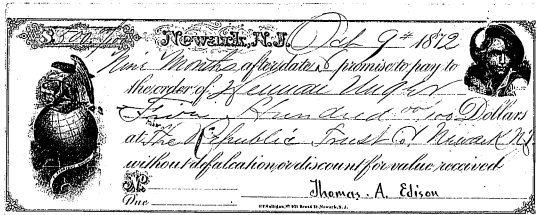

and of him demanded payment thereof, who then and there refused to pay the same: saying
the maker was not present, and had not then left funds for that purpose.
Whereupon I, the said Notary, at the request of the aforesaid, did Protest, and by these presents
do publicly and solemnly Protest, as well against the Drawers and Indorsers of the said
note as against all others whom it doth or may concern, for exchange, re-exchange
and all costs, charges, damages, and interest already incurred, and to be hereafter incurred for want of
payment of the said note

Then does and Testifies, in the City of Newark, aforesaid,
in the presence of John Doe and Thomas N. N. N.
IN TESTIMONIUM VERITATIS.

(P. O. Box 4889.)

Dec 20th Jan 7th 1878

Thos. A. Edison Esq.

Dear Sir,

In the matter of your application for patent in District Alarm Apparatus, the Patent Office will declare an interference after the usual preliminary statements are filed, giving the history and date of your invention. The time for filing these statements has been extended to March 15 on account of Mr. Carahan's absence.

If you will get these facts together and give them to me some time when you are at my office, can

prepare your affidavit.
Yours truly
Samuel W. Correll

A. E. BEACH,New York, Nov 3rd 1873

Dear Mr. Edison

I was much interested
in your explanation of your
Telegraph improvements, which
appear to be important and
valuable.

I presume you have taken
the steps necessary to secure the
same.

Yours truly
A. E. Beach

OFFICES FOR PROCURING

American & Foreign Patents,

119 & 121 NASSAU STREET,

(P. O. Box 4688.)

New York, Nov. 5th 1873.

J. A. Edison, Esq.

Dear Sir,

In the matter
of your application for patent
in Automatic Telegraphing, case
83, the Patent Office has with-
drawn the allowance as the
examiner thinks that the first
claim is anticipated by English
patent No. 1687 of 1864.

I think you have the blue
book of this English patent, if
so please bring it here so that
I can see what it consists of.

Yours truly
Lemuel W. Serrell

Thos. A. Edison Esq

Dear sir

I received today the
Spanish Patent granted for your Impts. in
Printing Telegraphs - Please call in and
execute the assignment of this patent to The
Commercial Tel. Co. & oblige

Yours truly
Lemuel W. Serrall
per C. H. Smith

(Harington's)
(1873)

Law of galvanic Induction.

The closing of the battery produces a momentary ^{induction} current in a direction opposite to that of the main current; the opening of the battery produces an induction current in the same direction as the battery current. The opening, closing and opening of the battery produces thereby induction currents of opposite directions.

4. Combination of 2 Relays works into
relays arranged into the sounder in
such a manner that when the S. is closed
the main battery passes the one relay
to the line and when it opens the id.
of prev Relay is thrown out of circuit,
and a relay adjusted much closer
for recording the current at the time,
the is placed in current. The first
it with the B is adj. at circuit with
from the armature to compensate for the
decreased power.

2. The effect of the transom. B is read
C. obligatory by means of putting on a
shunt ~~around the relay~~ at the same moment the
in B is put on. Within the shunt is a
neutralizing bath which sets up a
current in the relay opp. to that of
the M.D. the result of this shunt and
the consequent incr & decr of the strength
of the neutral. battery is obtained by an
adjust. Rheost. The manner of plan
every the M.D. and off the line
consists in putting in the line two main
bath's of equal strength with the
poles opposing each other so that
by a short circuiting ^{or shorting} one of these
batteries the other is allowed to
operate, then the bath. is short
circuited it should be through a
slight resistance. The main line battery

and equalizing battery is put on, off
by contact spring upon the sounder key.

When a signal is received from the
dist. sta. and the centre is open is
passed directly through the relay and opp.
battery comes down but when the S.H. is
closed open at Splitter, one through relay
the other through the equalizing Shunt
into the E. more current being brought
from the B. by reason of the d.c.

D The effect of the outgoing current
is neutralized (rendered null) upon
the R. by a local battery B. the coils
are arranged with the R. in such a manner
that the effect of the outgoing current
upon the coils of the relay is neutral.
by the iron cores of the local coils which may
be adjusted that it made by made to
exactly neutral the effect of the outgoing
coil. The S.H. at the moment it throws the
circuit on the line, closes this local coil.
I am an induced magnet if arranged
one coil ^{up} of which is in the same direction
as the neutral coil the coil of is upon
the main line the object of the induced
is to neutralize the outgoing current
upon the line at the moment of S.H.
& opening the transmission battery. When
the S.H. is closed the ^{induced} current of is
set up upon the iron core, induces a magnetic
current upon the line opposite

to the static current, of equal duration and neutral, & back of the other. At the moment of opening the static current is of opposite polarity, or gives the current of coil G the amount of induced electricity can be regulated by means of a Rheostat shunting it all F.

(Claim) Magnet & receiving R. is a double relay.

The ~~static~~ current induction will be as set forth. is neutral with current. The object of the slight resist is to prevent too much spark on the

C. 5

The effect of the outgoing current on the receiving R is neutral, by the effect of them selves. Two coils of equal strength one having a fine pole to one side, the other a fine pole to the other side of the R. with two Carbon poles connected with the Saunders Lever, (meaning that the fine pole is connected through a R. also the other to the Relay) The induced current passes through one side of the Relay to the R. & thence to the ground. when the R. is closed the carbon ends of the L. pole is connected through A and one fine current sent to the line the other to the line - but each coil against themselves produce no effect on the Relay. I claim.

a R.R. helix, R, F, combined into
two batts with the helix subpart of helix.
The reason why the two R's are included
between the B's is to prevent a short
circuiting of the Relay, but a very
slight resist is necessary as the
resist of both is consid. When the
S.R. is open the two M.B. will be
in a shunt around the R but opposing
each other produce no effect on the
Relay.

F. 6) The form of dial is worked by
 induction currents. It has helices wound
 in opposite directions upon core C, the action
 of putting on & off the battery is similar to
 those heretofore described. D is a secondary
 helix placed vertically over helix B
 into which the induced current due
 to the discharge of the core C. To the
 other end of this secondary coil is
 connected a polarizing or Electrical
 of the usual form. The effect of the
 transmitting battery is nullified by
 means of sending a current through
 the two helices. A, B is off and
 E is the Electrical the current induced
 into the second coil F are but man-
 mentary upon transmitting a current
 from the dial to a wave of elec-
 is induced into this second coil in
 one direction and through the polar-
 ize E over D in direction. When the
 battery at the dial has to discon. a
 current is set in the sec. coil, opp
 to the current generated by the closing
 which throws the tongue to the other
 side. But when the battery is thrown
 upon the line there is no current induced
 into it for the reason that it is
 here wound in opposite dir. and the
 other core does not become magnetized.
 F is an Electrical placed helix. the dial

and to both the object of which is
to neutralize the effect of the discharge
of a steady current by a charged
discharge upon its iron core.

Alumina
~~The secondary~~ ^{balanced magnet} ~~shut~~ in a dual cell
worked by induction current from a
secondary coil the primary of
which is the main coil,

Y The combination of the induction
coils.

3) The magnet of arranged in of
to destroy the static charge,

~~The currents need not be~~

G. The effect of the outgoing current is
rendered null on the receiving
it by means of sending an equal current
in the usual manner or dual cell through the
coil which is acting on the armature
in an opposite manner. - balancing the
magnet current. Placing the coil
to around the armature prevents the
generation of induced currents in the
relay itself when one helix is con-
closed with the other.

C is a magnet shunt from a ^{charge} source
from the main battery, the object of
this magnet is to generate by its charge
& discharge an induction current equal
to the static current upon the line.
The ind. Curr. acting upon the

helix D is an open circuit to the station
 current enters its effect upon the relay
 at TJ and ED are contact springs
 operated by the SL . GP are contacts
 to the ED & D to the ground when the
 SL is up, GP are separated from
 ED at the latter closing together
 preserving the continuity of the circuit
 to C . When it is down EX & Z are
 separated & the Bath is inserted
 (Chin). 1) The coil D acts upon the
 armature duplex with co-acts, and
 of Magnet C forming a part of com-
 pleting circuit for the lamp.

2) The contact, spring for battery
 H. This is a novel form of duplex,
 worked by reversal of the currents,
 it is an Elch. acty. when closed,
 ED are contact points, arranged with
 the bath TXB , one of them being pos. to
 the line, both with the neg. to the line.
 both it & D are of equal strength and
 equal dist. from their resp. armatures.
 It is a polarized R operated by pos.
 neg. currents, R is a Morse Key, the
 whole is the dist. SL the object
 of the key & R is to mix & send the
 current upon the line so as to effect
 the lever of the relay WN . This in-
 crease of current does not effect the
 Polarized relay so that signals

208.

are transmitted from the distant
are received by relay $\frac{1}{2}$. While the
positive & neg. Curre are transmitted from
the the source of P. to the Curre
these Curre operate the polar $\frac{1}{2}$ pl.
When the $\frac{1}{2}$ is closed, it & its back
is thrown out of Curre & the back is with
the pos. polarity, is in the circuit, then
the $\frac{1}{2}$ is open, it is thrown out of
circuit & it with neg. polar is thrown
into circuit. The reason why both
pos & neg are not passed through the
magnet is that the ~~relays~~ magnet would
charge & discharge as the polarity was
changed but by sending a turn of one
polarity through neg. relay and a
current of another ~~relays~~ throw another $\frac{1}{2}$
the effect is the same on the line,
but each $\frac{1}{2}$ receives a current of
the same polarity consequently re-
versal of the current takes place
without showing it on the relay $\frac{1}{2}$.
As to the polarized relay it is well
advised to & both follow the pos & neg
Curre whether the tension of the
battery is suddenly decr & inc.
Claim. The polarized relay can
be placed at a number of stations
on the line & each will be able to
receive from the transmitting $\frac{1}{2}$.
Claim. Reversing the polarity ~~of the line~~ through

the receiving relay is substituted.
If working the electro-magnet will be an
indicator of the current & placing
on the line a number of polarizable
operated by the reversal of the polarity.
